PRODUCTS TO IMPROVE HOME TV RECEPTION

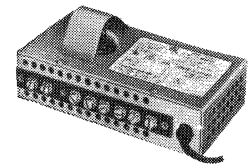
IN-THE-HOME VHF/FM SIGNAL AMPLIFIERS

TRANSISTOR 4-SET TV/FM BOOSTER, MODEL IT-4 — The IT-4 "Quadrabooster," designed around a rugged, long-life transistor, is very inexpensive to operate and requires almost no maintenance. The transistor takes so little power that it need never be turned off. Specially designed for weak signal areas, the "Quadrabooster" provides crisp, brilliant pictures for as many as four TV or FM sets from a single antenna. Used for one set it increases signal strength 4 to 8 times. Used for two, three or four sets, it has amplifying power to spare and provides necessary isolation between sets. Net **$19.95**

2-SET TV/FM BOOSTER, MODEL B-42 Low-cost combination booster-distribution system provides clear, sharp reception for up to 2 TV or FM sets from one antenna. The B-42 more than doubles signal voltage for a single set, with excellent isolation. Its frame-grid tube amplifier is ideal where there are both strong and weak signals because it can handle strong signals without overloading. Net **$14.25**

4-SET TV/FM BOOSTER, MODEL B-24c Triples signal power to one set. Also acts as an amplified coupler to operate up to 4 TV or FM sets. Provides proper impedance match and isolation between sets and increases picture power when used with 2 or 3 sets. With 4 sets it insures that each TV or FM set receives more than 90% of the signal power picked up by the antenna. Net **$17.25**



FM STEREOBOOSTER, FMB — Covers the entire FM band, increases signal strength 8 times (18 db) prior to the signal entering the tuner or radio. This assures the most powerful, distortion-free reception. Extremely low noise figure — absolutely essential in FM stereo where overall signal-to-noise ratio may be degraded by a factor of 20 db or more over regular FM reception. Signal handling capability — won't overload when there are strong local stations present. Low VSWR eliminates distortion resulting from phase and amplitude variation and standing waves caused by impedance mismatch. Compact, easy to install anywhere indoors — near the FM tuner or radio, on the base board. Net **$14.55**

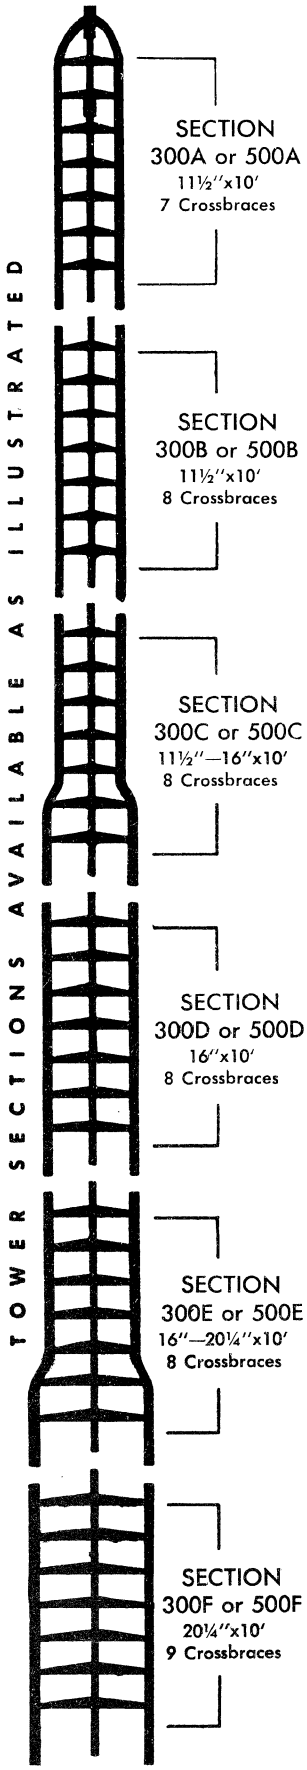
TOWERS

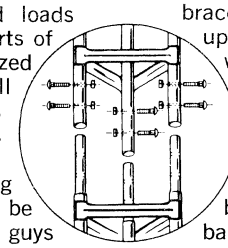
SELF-SUPPORTING UP TO 60 FEET HIGH
HOT DIP GALVANIZED HEAVY DUTY MODELS
ZINC ELECTROPLATED ECONOMY MODELS
NO LOST TOWER FOOTAGE
FAST, EASY SECTIONAL ERECTING



With these two Jontz Tower models you can fill any tower needs . . . from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Zinc Electroplated Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. The Hot Dip Galvanized Heavy Duty Model No. 500 will withstand hurricane force winds having been tested at wind loads of 80 mph.

Model No. 500 is self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 500 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

Both towers are fabricated in 10'0" sections and can be erected in one piece or by sections. Model 300 is made from 1¼"x18 ga. tubular uprights and is zinc electroplated and dipped in clear Butyrate lacquer. The Model 500 is made from 1¼" x 16 ga. tubular uprights and is hot dip galvanized.



New, extra-wide corrugated crossbraces give 75% more weld contact with uprights. Tower sections lock together with 2 self-locking ⅜" bolts in each leg. The splined bolts prevent thread damage and stop hole stretch when tower moves in the wind.

HOW TO ORDER: 1. Specify if to be mounted in concrete or drive-in base. 2. Order by specific sections, starting at the base. See illustration for section numbers.

SHIPPING: For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles, unless otherwise specified. (Example: a 60 ft. tower will consist of section A, C, D, E, and 2 F's.)

SKYMASTER COAX ANTENNA

Skymaster gives you a lower "radiation angle" of your antenna for a better contact for vertically polarized stations in the citizens band. The Skymaster has a nominal impedance of 72 ohms, used with 72 ohm cable. Matches RG59/U coax cable for perfect match to most transmitters and improves receiving.

Both radiator and skirt are of heavy-gauge aluminum tubing, and a resilient machined polyethylene insulator is used for low weight and high strength. Silverplated coax connector is used for easier connection and lowest SWR.

- **Easily installed on any existing mount**
- **Concentrated signal for best coverage**
- **Perfect match for transmitting and receiving**
- **Highest quality components**
- **Tested and approved in Master Mobile's own laboratory**

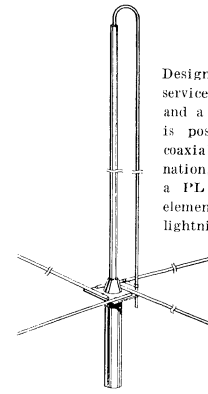
BASE STATION MONOPOLE ANTENNA



Designed around a folded radiating element, intended for service in installations requiring a ground plane configuration and a wider useful frequency range for a single antenna than is possible in the standard ground plane design using a coaxial stub tuner. Antenna is fed by an end seal type termination, through a Type SO 239 female connector mating with a PL 259 plug. Radiating elements and all ground plane elements are permanently grounded, therefore, damage by lightning is reduced to a minimum.

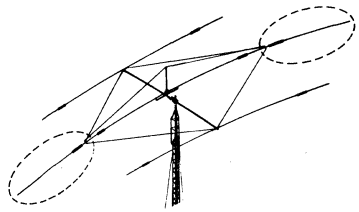
TA-40KR

40 METER OPERATION



In only a few minutes time you can now convert your Mosley Model TA-33, TA-32, TA-31, or TA-36 for operation on 40 meters as a single rotatable dipole. Beam operation on 10, 15 and 20 meters is virtually uneffected. The Model TA-40KR, when installed on the driven element of a Model TA-33, TA-32, TA-31 or TA-36, will exhibit a typical figure eight pattern obtained from a half wave antenna.

This new, easily assembled 40 meter conversion kit, Model TA-40KR incorporates the same precision engineering and high quality aluminum construction you expect in a Mosley beam. No additional feed line is needed for 40 meter operation. Complete instructions for assembly are provided.

Only a Mosley conversion kit which incorporates the famous Mosley trap assembly design with features that maintain stability of resonance under all weather conditions assures you of continued top performance with your "Trapmaster" beam on 40 meters.

Because of the difference in mechanical strength of some antennas as well as possible differences in electrical design, use of the Model TA-40KR conversion kit is not recommended on any antennas other than Mosley Models TA-33, TA-32, TA-31, and TA-36.

SWR 1.5/1 or better at resonant frequencies. Maximum element length 38 ft. 7 in. Turning radius 19 ft. 6 in. Assembled weight 10 lbs. Trap Assemblies, Hardware, mast and line for guying is supplied. Shipping weight

STANDING WAVE REFLECTOMETERS

MODEL CM-52

Mutual inductance and capacity coupling are employed between linear conductors for continuous measurement of standing waves on transmission lines. For continuous line insertion 25 to 1,000 watts, at frequencies from 3 to 200 mc. Operates on power input of 10 watts, 7 mc and up. Requires only five watts input, 25 mc and up. Line insertion loss, less than 1 db at 30 mc. Ideal for inserting in to coax feed lines at antenna for visual reading in SWR while making antenna adjustments: SWR observed immediately, at all times, without adjustment of Reflectometer. No balancing adjustments, no reversing. Prevents false loading from antenna tuner, match box, pi network, etc. Reduces line reflection, making possible increased radiated power. Uses 0-100 ua meter calibrated directly in standing wave ratio and relative power. Each unit hand calibrated and perfectly balanced. Includes loading control and forward to reflected power reversing toggle switch. With 83-1R (SO-239) connectors at each end. Gray hammertone aluminum case, 3"wx2¼"dx5¼"h. NEW RCA "BRITE SITE" TV AND FM ANTENNA

- Covers Entire VHF-TV and FM Bands
- Can Be Completely Concealed
- Printed Circuit for Simple Installation

Economical TV-FM indoor antenna that produces excellent results when used in locations up to thirty miles from station. Actually a full-size conical antenna projected on a flat surface 52x12" in size. Extremely convenient where use of an outdoor antenna is impractical. Designed for use in attics, on garage or utility room ceilings, beneath rugs, on walls, under sofas, etc. Antenna elements are deposits of finely powdered pure silver in plastic binder, imprinted on a tough, flexible, fibrous sheet. Recommended for use at the highest practical level within the home (away from metallic plumbing and heating systems). Very simple to install—just set it in position that provides best reception—tack it and forget it. Since it is not exposed to the weather, it will last for years. Gain characteristics are similar to those of standard outdoor conical antennas. Supplied complete with 10 feet of 300-ohm twin line—ready to use. Shpg. wt., 1¾ lbs.

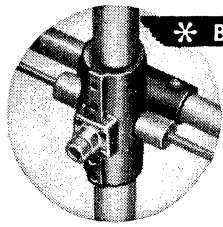
Precision Industrial Antennas by SCALA

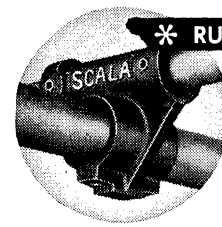
Why you get better performance with Scala Antennas–



✻ BUILT-IN BALUN

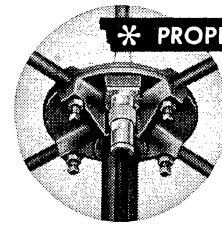
(pat. pending)

Provides a balanced feed system assuring equal distribution of current to the driven element, greater electrical and mechanical stability. The balun allows the driven element to be supported by metal and eliminates the necessity of using the insulator as a mechanical support.



✻ RUGGED CONSTRUCTION

Elements are supported by machined castings providing a larger support area, damping vibrations and reducing the concentration of stress and metal fatigue. Mechanical splices are never used. All units are available in metals other than aluminum if desired.



✻ PROPER STRUCTURAL DESIGN

A machined casting, webbed for extra strength and structural support is used to hold parasitic elements in the ground plane antenna. Set screws and lock nuts provide simple assembly and easy installation.

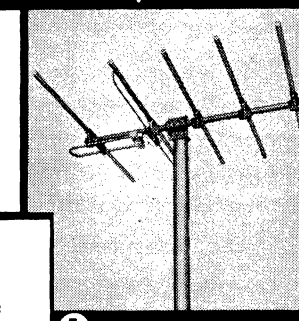
✻ BUILT-IN HEATER

Most of the antennas described below can be obtained with a 24 volt heating system for maximum weather protection and assured winter operation.

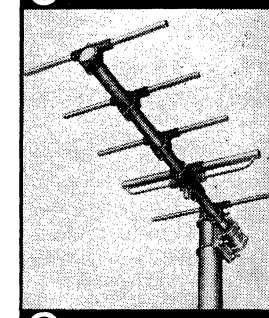
✻ TESTING AND INSPECTION

Each antenna is tested twice for impedance match—once during manufacture and again prior to dis-assembling for shipment. New models are field-tested for one year before released for production.

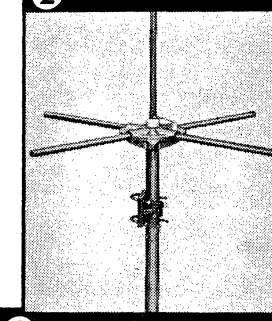
**Shipped complete—all U-bolt mounting clamps and brackets are included. Unit is ready for installation.*



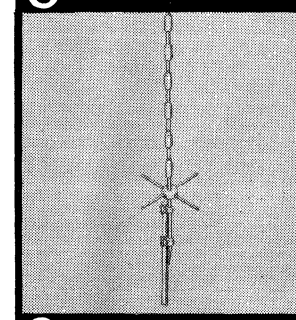
1 MODEL CA5-150



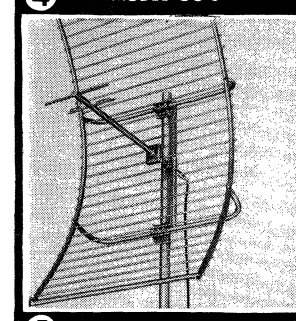
2 MODEL CA5-450



3 MODEL GPC-150



4 MODEL OG-6



5 MODEL PR-450

1 YAGI—VHF

The Scala Model CA5-150 is a 52-ohm 5 element yagi. Nine db gain on the major lobe is assured by careful design and Scala's exclusive feed system which eliminates radiation from the feed line and provides equal distribution of current to the driven element. The VSWR is less than 1.3 to 1. For complete weatherproofing and year-around operation, the boom can be provided with a 24 v heater. The unit is annodized and dichromate sealed.

2 YAGI—UHF

The Scala Model CA5-450 general communications antenna is a product of years of extensive research. Its construction is possible only because of developments in foam plastics and Teflon insulated cable. A Teflon insulated balun is located within a chamber filled with a special foam plastic for complete moisture and corrosion protection. High strength 7/16" solid aluminum rod is used for the parasitic elements. VSWR is less than 1.3 to 1. Gain is 10 db. Two units may be mounted in an array for an increase in gain up to 3 db and greater directivity. Shipped completely assembled, the unit is annodized and dichromate sealed.

3 GROUND-PLANE—40-170 MC

The Scala Model GPC-150 ground-plane antenna is ideal for non-directional, all weather communications. It is the first ground-plane antenna that can be obtained with 24 v heaters throughout — including the radial elements, providing a completely weatherproof and safe year-round operating antenna. Another version of this unit, comes equipped with a reflector and provides a cardioid radiation pattern with increased gain. In all cases the VSWR is less than 1.3 to 1. The unit is annodized and dichromate sealed.

4 OMNI-DIRECTIONAL GAIN ANTENNAS

Scala's Omni-Directional Gain Antennas—150 Mc and 450 Mc—use half-wave independently fed radiators. Model OG-4 (150 Mc) provides 4 db plus gain over dipole; Model OG-6 (450 Mc) 6 db plus gain over dipole. All elements at DC ground supported by metal. Extremely rugged anodized aluminum construction. Shipped ready for installation.

5 PARAFLECTOR®—350-1000 MC

The Scala Model PR-450 Paraflector® is a major contribution toward the improvement of antenna construction and performance in the 350 to 1000 mc range. Essentially, a parabolic section in one plane, the driver is positioned to approach a point source. Over the 350 to 1000 mc range, the Paraflector® is equal to a parabolic dish of the same aperture and has the advantage of lower cost, lighter weight, ease of assembly, installation and rugged construction.

EXACTING DESIGN—TESTED MATERIALS—PRECISION MANUFACTURE

In addition to the antennas described above, and other standard communications, telemetering and community systems, Scala maintains a complete engineering service to design and manufacture special antennas to your specific requirements.

DG-27

CSJ-27

SM-27

⅝ WAVE LENGTH 20-FOOT COLINEAR GROUND PLANE ANTENNAS

Omni-directional fixed base station antenna concentrates RF energy at lower radiation angle than any other design. ⅝ wave length gives 3.4 db gain over a ground plane, doubles effective radiated power, vastly increases useable CB range.

TWO MODELS AVAILABLE
CGP-27 GOLD ANODIZED **Net $32.97**
CGP-27 STANDARD SILVER **Net $29.97**

Closely-fitted assembly mostly pre-constructed to reduce installation time. Coaxial fitting at front of base; line goes to CB set on outside of suporting mast. Reactance cancelling coil provides very close match, lowers VSWR. BASE: cast aluminum. MAST HOLDER: reinforced phenolic. EXPOSED FITTINGS: epoxy-sealed against corrosion.

CHARACTERISTICS:

Impedance — 50 ohms
Termination — SO-239
VSWR — 1 to 1.2
Lightning protection — gap
Polarization — vertical

Height — 17'3"
Weight — 9 lbs.
VERTICAL RADIATION PATTERN

YAGI ANTENNA
3V-27 **Net $36.00**

This Citizens Band Yagi sets new industry standards for performance and mechanical stability. Light, versatile, rugged and say to install — these are features Citizens and enthusiasts expect and get from Tenna. Use this Yagi to substantially increase your CB range, reduce interference.

The special configuration of the 3V-27 yagi uses a 2 db gain half wave end-fed antenna as its heart. Most other CB yagis employ a 0 db dipole. High angle of radiation seriously limits the expected gain. The half wave end-fed radiator used in the new 3V-27 has an inherently low angle of radiation, placing an enhanced signal out low along the ground. Transmitted signal is far stronger, received signal is clearer and sharper.

Constructed of aircraft-type aluminum, it is light and strong, made to mount vertically. Greater strength and rigidity through the use of a truss construction on the boom.

Light, versatile, rugged and EASY TO INSTALL. TENNA has completely eliminated the guesswork and possibility of assembly error through a fool-proof design. Element positions are predetermined, then elements and their corresponding sockets are numbered for easy matching.

The 3V-27 is designed to give a light and balanced load on supporting masts and can be turned with TV types of rotators.

CHARACTERISTICS
Impedance — 50 ohms
VSWR — Within 1.6 to 1
Lightning protection — gap
Polarization — vertical
Double heavy wall aluminum structure
Tapered 3 section elements

SPECIFICATIONS
Separate clamps for vertical and horizontal mounting
Weight — 10 lbs. Length — 9 ft.

QUARTER WAVELENGTH RADIATOR ANTENNA STANDARD GROUND PLANE ANTENNA
DG-27 **Net $15.99**

Featuring the only inductively shortened radials available.

The DG-27 is a ¼ WAVELENGTH RADIATOR ANTENNA — nine feet long — that makes an efficient inconspicuously fixed base station antenna. The radiator is aluminum tubing rigidly held to prevent whipping. The radiator holder is a rugged machined aluminum heavy-duty casting; has an open bracket design for easy mounting of the coaxial cable.

On the DG-27 model the radials are shortened to 50" and loaded with an inductor coil to compensate for length. Four short radials are used to provide: a better match, improved ground effect, less wind resistance, lighter weight, less wind whipping and easier mounting, takes up less space.

CHARACTERISTICS
Impedance — 50 ohms
Termination — accepts PL-259 connector
VSWR — 1.3 to 1
Lightning protection — direct ground
Polarization — vertical
SPECIFICATIONS
Radiator — heavy duty aluminum tubing
Radials — has shortened inductively loaded radials
Will mount on up to 1½" masting
Height — 9 ft. Weight — 3½ lbs.

COAXIAL SLEEVE ANTENNA
CSJ-27 **Net $19.95**

The CSJ-27 is a COAXIAL SLEEVE CITIZENS BAND ANTENNA, neat, light, trim and mechanically superior. Its slim lines blend into the surroundings whether mounted on a mast or a chimney. The skirt or sleeve of the antenna is made from 1 inch diameter aluminum tubing, with an insulated sleeve on the bottom for mounting. The tapered radiator consists of ½" diameter aluminum tubing tapering to a second section ⅜" O.D. It has an inherent low angle of radiation which makes it a naturally better performer. This efficient, hard working antenna will give many faithful years of trouble-free service. No radials required — the coaxial provides this function. The base, made of reinforced molded phenolic, is supported by a cast aluminum bracket.

CHARACTERISTICS
Impedance — 50 ohms
Termination — 50 ohm feedline
VSWR — less than 1.5 to 1
Lightning protection — gap
Polarization — vertical
SPECIFICATIONS
Radiator — tapered two sections
Coaxial Sleeve — 1" aluminum tubing
Height — 18 ft. Weight — 3 lbs.

HALF WAVELENGTH END-FED ANTENNA REQUIRES NO RADIALS
SM-27 **Net $19.95**

The SM-27 is ½ WAVELENGTH END-FED ANTENNA which provides a 2 db gain vertically polarized, omnidirectional base station antenna for Citizens and use. The radiator is rigidly constructed tapering from 1⅛" to 1 inch O.D. to ¾" O.D. tubing. The base, made of reinforced molded phenolic, is supported overall by a cast aluminum bracket. No radials are required — makes this antenna easy to install. Comes complete with launcher cable.

CHARACTERISTICS
Impedance — 50 ohms
Termination — takes PL-259 connectors
VSWR — 1.3 or 1
Lightning protection — Gap
Polarization — vertical
Pattern — omnidirectional

AUDIO/VISUAL/SIGNAL SYSTEMS & PARTS
FOR HOTELS — MOTELS — INSTITUTIONS

INSTITUTIONAL ELECTRONICS FOR OVER 25 YEARS RELIABILITY

AMERICAN COMMUNICATIONS CORPORATION now offers all the materials (and supervision) to complete a wide variety of electronic Systems installations. AMERICAN'S Professional Engineers will lay out these installations on architectural plans gratis, where AMERICAN'S equipment is used. Systems include:

Status Controls — for hotel/motel rooms; hospitals; factory production, test, inspection, count-down, etc.

Closed-circuit TV — for hotel and motor-inn registration and check-out; hospitals; apartment buildings; schools; industrial inspection and remote monitoring.

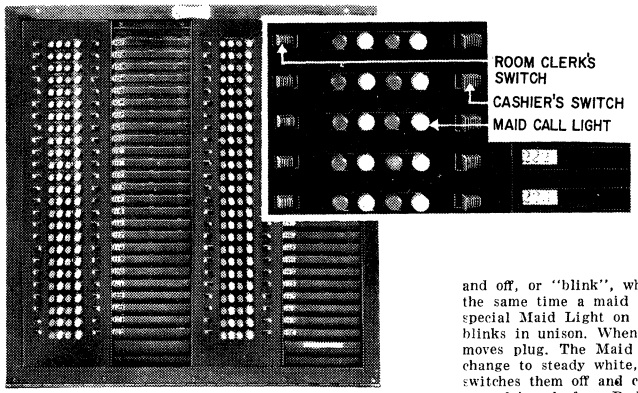
Additional Systems:

Signal Mail Rack	Automatic Wake-up
Message-at-Desk	Selective Paging
Maid Call	Motel-O-Phone
Master Radio/TV Antennas	Area Sound/Lighting
Centralized Radio	Emergency Alert
Room TV • Stereo Sound	Automatic Fire Alarm
Public Address	Audio/Visual (silent) Call
Background Music	Doctor's Call Board

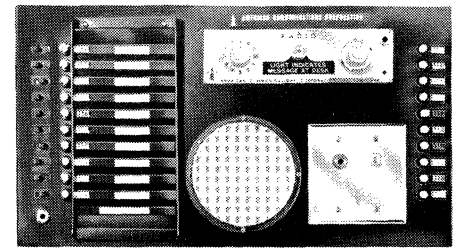
ACC's Newest — TV-SET THEFT ALARM

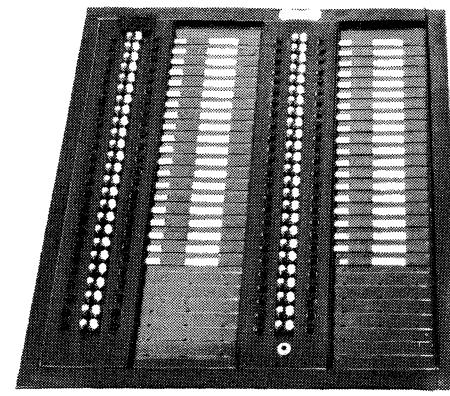
ROOM STATUS CONTROLS

ONLY ONE CONTROL WIRE REQUIRED PER ROOM! LITERATURE AVAILABLE (SPECIFY NUMBER OF ROOMS).



(left) A-L3/50 (50 rooms, 4 lights). Switches: left row, Room Clerk; right, Cashier.
(upper-right) A-L5/10 (10 rooms, 1 light). Demonstration Panel. Shows Room Speaker, two types of Room Units; Housekeeper lights are at right.
(lower-right) A-L4/50 (50 rooms, 2 lights). Housekeeper panel has only lights.





ROOM STATUS CONTROLS, originated by AMERICAN COMMUNICATIONS CORPORATION, are now considered an essential facility in the efficient and economical operation of hotels and motels; 4 basic designs now make this electronic aid available to occupancies of all sizes, to instantly signal to Front Office and Housekeeper the changing rental status of all guest rooms.

In addition, such instantaneous sequential control and monitoring is adaptable to 1) hospitals, for bed status ("available", "occupied", "on change") control between Admitting Office, Cashier, and Floor Supervisor, 2) restaurants, for table reservation control between Reservation Desk, Maitre d', and Waiter, and 3) Schools, Factories, Laboratories, Missile Centers, etc.

OPERATION — Operating procedures depend upon the particular model. All, however, utilize switches and lamps for maximum reliability — relays are NOT used in **AMERICAN'S** room status controls systems.

No. A-LI-2 (2 board), A-LI-3 (3 board); 3 lights. (No Maid Light, and does not connect to guest rooms.) When guest has registered, Room Clerk switches color from Green — Room Available, to Amber — Room Rented. When guest checks out, Cashier switches signal to Red — Room on Change. Housekeeper signals when room is ready for occupancy by switching from Red to Green.
(†) Net: *A-LI-2/—, $25.00; *A-LI-3/—, $30.00.

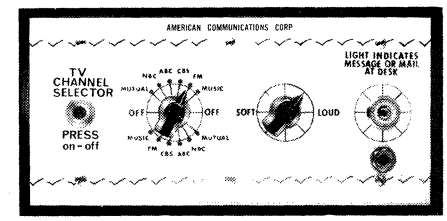
FOLLOWING SYSTEMS CONNECT TO GUEST ROOMS

No. A-L3-2 (2 board), A-L3-3 (3 board); 4 lights. Room Unit has jack **and** light. Status board Maid lights — the 4th row of lamps — show white, and start to pulse on and off, or "blink", when maid plugs into room jack; at the same time a maid paging circuit is connected, and a special Maid Light on guest-room Room Unit lights, and blinks in unison. When room has been serviced, maid removes plug. The Maid Lights on the control boards now change to steady white, and remain on until Housekeeper switches them off and changes the status lights on all the control boards from Red to Green — Room Available; the special Maid Light on the Room Unit goes out automatically when maid removes plug.
(†) Net: *A-L3-2/—, $40.50; *A-L3-3/—, $45.50.

No. A-L4-2 (2 board); 2 lights. For reasons of economy, this Room Checkout model, especially designed to meet the needs of the smaller occupancies, such as motels and motor inns, permits maid to **automatically** change status indication directly from guest room! Also, it has only 2 status lights (one Green, one White) on Front Office board, and 1 (White) light on Housekeeper panel. "Green", signals Room Available; No Light, Rented. Green **and** White, blinking, indicates Maid in Room and that Maid Call circuit is connected. White (steady) indicates room On Change.
(†) Net: *A-L4-2/—, $25.00.

No. A-L5-2 (2 board); 1 light. This Room Checkout system is the ultimate in design economy! One light on Front Office board lights to show Room Available; No Light, Rented. When guest checks out, front office clerk moves status switch so light starts to blink — room On Change. Upon instruction from Housekeeper, or upon noting blinking light on a hall signal unit, maid enters room and plugs into Room Unit. This connects Maid Call circuit (even if room is not on change). Upon completing room, maid removes plug, which **automatically** changes Front Office and Housekeeper lights to steady — Room Available.
(†) Net: *A-L5-2/—, $15.00.

GENERAL INFORMATION — In a 2-board system. Front Office board includes switching facilities and lights for Room Clerk, Cashier; a 3-board installation provides separate panels for these offices. All front office boards include standard guest Room Rack. Controls may be on wall panels, flush or surface mounted, or in desk consoles, depending upon size. Monitor boards (lights only) can be supplied for supervisory personnel.



A-ELP1 Electroluminous Panel. Operates on A-C. Diffuses a night-light glow in room. Mounts on standard outlet box. **Manufactured to order.**

(†) **Priced per room, up to 100 rooms; less cable, Room Unit (where required).**
* **Protected by Pending Patents.**

MAID CALL SYSTEMS

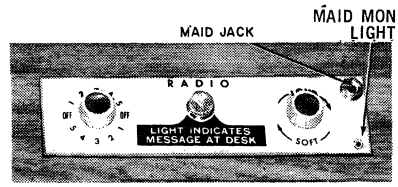
No. A-MC-A/- is visual type. Maid plugs into room jack, which lights a lamp on a Light Panel in Housekeeper's office. Can then be paged if paging circuit is connected. Light goes out when Maid removes plug from jack. This system includes room jacks, Maid Plugs, **A-MC** Light Panel (lights only), Power Supply.

No. A-MC-B/- *Blink Light type. This newest design makes room recovery extremely rapid, through its Maid Monitor/Housekeeper "blink lights".

Soon as Maid enters guest room she plugs into Maid Jack on Room Unit. Immediately a tiny light under the jack slowly blinks on and off; at the same time, a second light blinks on Housekeeper's Light Panel, indicating "Maid in Room". Housekeeper can now page Maid if paging is provided.

When Maid has readied room, she plugs all the way into room jack, then removes plug. Maid's light now goes out but Housekeeper's light changes to steady-on —"Room Ready"; she can now switch light off at her convenience.

Installation includes Room Jacks, Maid Plugs, an **A-MC1/-** Light Panel (with lamps and switches), Power Supply, Blinker Unit.



A-P5-A Room Unit, includes jack and light for "blink light" Room Status and Maid Call. **Net $15.00.**

Room Clerk can use a **No. A-MC** Light Panel to monitor room status shown on Housekeeper panel.

SPECIFICATIONS

Maid Call Light Panels are built for Desk, Flush, or Surface mounting, in sizes to suit needs. Material: steel; standard finish: gray Hammertone enamel. Designation strips identify rooms. Lamps have long operating life, on 24 V. circuit.

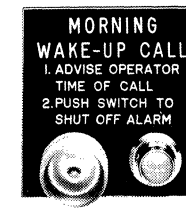
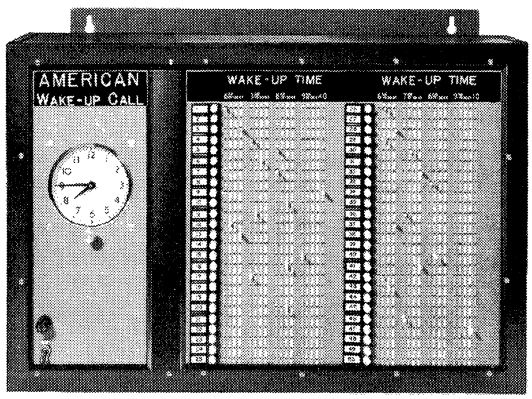
REQUIRES ONLY ONE CONTROL WIRE PER GUEST ROOM

AUTOMATIC WAKE-UP CALL*



No. A-P8-A Wake-up Call room unit.



No. A-WA1/50 Automatic Wake-up Call.

AMERICAN'S No. A-WA-1/- Automatic Wake-up Call is a tremendous time-saver for occupancies of any size. **Model A-WA-1/50** here illustrated is for a 50-room hotel or motel.

Master Control Panel has for each guest room a room designation strip, lamp, and 17 Time Jacks — one for each quarter-hour from 6 to 10 AM. When telephone Operator receives guest's wake-up call time, she inserts a plug into the respective Time Jack. Operation now is fully automatic: Wake-up Call "remembers" calling time and sends an insistent to the room, at the proper calling time.

This calling signal is both visible and audible: (a) at 2-second intervals a light blinks at both the office control panel, and in guest room; and, (b) in one model a recording advises guests to "shut me off" and in another a buzzer sounds loudly, when guest pushes a button (at blink light on Room Unit), signal light goes out in guest room and on office panel, and audio signal stops.

GENERAL SPECIFICATIONS

No. A-WA-1/- System includes Master Control Panel with Time Clock for 4-hour timing (up to 6 hours can be supplied); complete set of Time-set Plugs; either an **AMERICAN No. A-TD** continuous-play Tape Deck and pre-recorded Tape (not sold separately) or a Buzz Generator; 2-second Timer; and, guest-room Unit. Long-life, low-current signal lamps are used. Fuse holder, Off-On Power Switch, are front-mounted. Satin-black steel case is approx. 31 x 21 (plus 2″ mtg. skirt at top) x 4″ deep (50-room unit, illustrated); wgt. approx. 100 lbs. Operates on 115 V., 60 cy. A-C.

Net $20.00 per room, less room units; materials only. **Room Unit** (light, switch, wired and assembled on lettered metal plate, to mount on 2-gang outlet box). **Net $8.75 ea.** Cable extra.

SIGNAL MAIL RACK & MESSAGE-AT-DESK

REQUIRES ONLY ONE CONTROL WIRE PER GUEST ROOM

AMERICAN COMMUNICATIONS manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The **Mail (and Message) Rack Signal System** is comprised of numbered pockets, one for each room (or other unit), and a lamp and switch for each pocket. Each pocket is wired to a guest-room. When clerk files mail (or messages) in pocket, he switches on a corresponding lamp; simultaneously, a duplicate lamp in the remote room lights, and remains lit until guest acknowledges the signal.

A new **2-Way model, No. A-MR2,** with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest and for Telephone Operator to insert messages from the opposite side (and also signal the guest).

The **Message-at-Desk Signal** is identical with the Mail Rack System, except that there are no pockets — only lamps and switches mounted on a control panel. Message clerk — usually the telephone operator — signals to guest that there is a message (or mail) by moving a switch as above described. **Model A-MD1/85** (illus.), for example, is a desk-top model for 85 guest rooms.

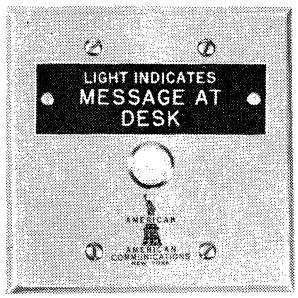
The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with shelf at top of each pocket for room key.

If guest room is not wired for radio, a separate wall plate, **A-P20-3-A,** is provided for the signal lamp; otherwise, it can be included on the radio control panel (See Room Unit on facing page).

Long-life lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front. A metal stop strip across the back of each row of pockets, in the standard or **A-MR3 Mail/Message Rack,** permits insertions only from front. **Model A-MR3/100** (illus.), is for 100 rooms, but units can be built to 1,000 or more.

They may be made for Flush-wall recessed), Surface-wall or Desk (table-top) mounting. An easily removable end cover plate permits access to writing. Power Supply unit (included) is controlled by a switch. House signal wiring carries only low, safe voltage.

AMERICAN'S No. A-22X/- Multi-conductor Cable is used for connection to distribution point, and A-19/1 or A-19/2 wire for runs to Room Units.



No. A-P20-3-A Signal Plate, in guest room, measures 4⅝″ sq.

MASTER RADIO OR TV ANTENNA SYSTEM (& CATV)

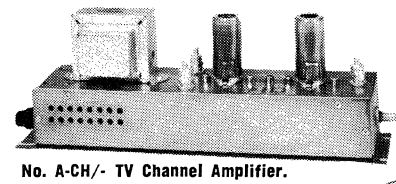
Installation requirements for an **AMERICAN COMMUNICATIONS Master Antenna System** whether for Radio or TV — or both — mainly depend upon field signal strength and local interference. A field-strength survey must be made to determine whether the received signals are sufficiently strong and reasonably "clean".

If TV signal strength in the area is low, a weatherproof **No. A-BA Broadband Booster Amplifier** (shown mounted on mast) located at the antenna may be used, for an additional 25 db gain on all VHF channels; power supply and Off-On control are a separate, remote unit, No. A-BAP (not shown), which may be up to 500 ft. distant. Input and Output, each 300 or 75 ohms. Terminals permit use as Broadband, High-band, or Low-band Amplifier.

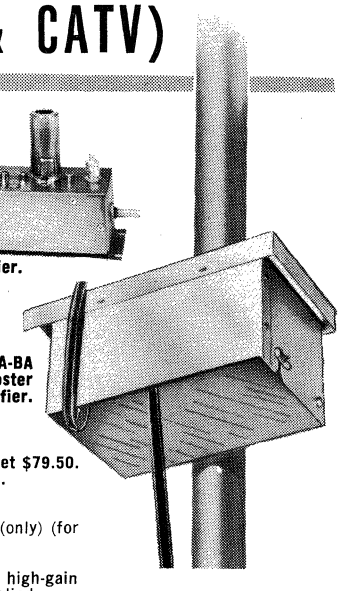
The Radio signals are fed to the **Centralized Radio System,** and the TV signals are distributed to the various TV risers.

TV signals on UHF channels may be converted to unused non-adjacent VHF channels by means of a **No. A-U/V-C Converter** (not shown); its UHF Mixer head mounts at antenna, and delivers VHF signal to remote oscillator. Specify the UHF and VHF channels. Converters are also available to cover VHF High to VHF Low, **No. A-V/V-C.**

To deliver adequate signal strength at each TV outlet, it usually is necessary to use low noise, high gain, head-end amplifiers, one for each channel. A **No. A-CH/- TV Amplifier Strip** is shown here. A group of up to 7 such channel amplifiers can be assembled in one steel cabinet, **No. A-C/CH/-** (not shown here).



No. A-CH/- TV Channel Amplifier.



No. A-BA TV Booster Amplifier.

No. A-U/V-C Converter, w/UHF Mixer Head. Specify UHF and VHF channels. **Net $75.00.**
No. A-V/V-C Converter, w/Mixer Head, for VHF to VHF. Specify channels. **Net $75.00.**
No. A-CH/- Channel Amplifier. Specify which of channels 2 to 13. **Net $44.00.**

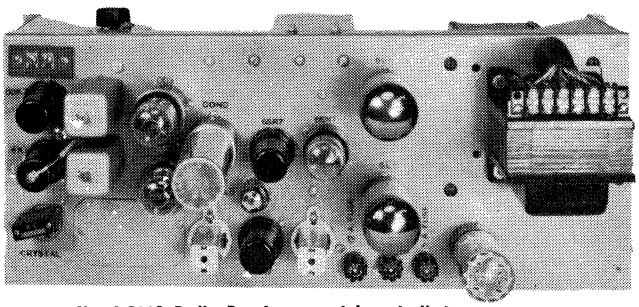
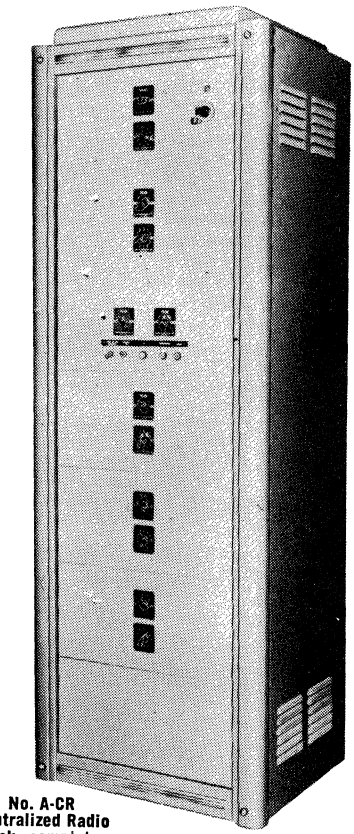
For Community Antenna TV (CATV) installations, special towers, high-gain directional antenna arrays, and low-noise amplifiers can be supplied. **For Coaxial Fittings,** see **last two pages.**



No. A-300C Radio Receiver, crystal controlled.

CENTRALIZED RADIO SYSTEM



No. A-CR Centralized Radio Rack, complete

The control center of **AMERICAN COMMUNICATIONS'** "Channelized" Radio System is the **No. A-CR Rack Unit** shown here. Signals from the Antenna System are fed to the Rack-and-Panel assembly, and then to remote speakers (guest rooms, public areas, etc.) through a system of properly selected cable and matching components as specified by the Supervising Engineer.

No. A-CR Rack can be modified to suit requirements. The standard Rack, however, is comprised of 4 **AMERICAN** No. A-300C AM Crystal-controlled Radio Receivers, 1 No. A-300T AM Tunable Radio Receiver, a panel-controlled **No. A-P/M Preamplifier/Mixer** (for mixing a high-impedance microphone and phonograph), Monitor Speaker, power supplies and controls, and Timer. The Radio Receivers deliver a minimum of 40 watts audio power. (Additional amplification, if needed, is incorporated in a second Rack).

If the tunable receiver is a **No. A-300F** (for FM reception), the house manager may tune it, like the **A-300A** AM Radio Receiver, to a continuous-music station for background music, available to guest when he switches to this channel — within the operating hours automatically controlled by the Timer.

The Monitor Speaker (optional), hinged to Rack, has same response as room speakers for true check of programs as received in guest rooms. Switching permits its use on background music, P.A., etc.

If Rack is to be used with **AMERICAN'S** Emergency Alert System, the standard model will include 8 hermetically-sealed relays — one each for the 5 radio receivers, one in preamplifier/mixer, one in the automatic timer circuit, and one in a booster amplifier circuit. These enable remote Emergency Alert equipment to assume control and deliver to all the loudspeakers a suitably high signal whenever needed, regardless of off-on status of Rack, room speaker channel-selector switch, or P.A. system.

Rack can include additional facilities, as for example switching into Muzak or other wire line, or use of tape or record player, for background music. For **Stereo FM reception,** using a multiplexed FM station as the source of both stereo channels, a Stereo Multiplex Adaptor is added to the existing FM receiver, and the two resulting audio channels are fed to stereo equipment.

Receivers are high-fidelity type, with push-pull output. The **No. A-300C Radio Receiver** is shown here; **No. A-300T,** and **-F,** have same physical dimensions and general appearance. Several features make these receivers exceptionally reliable and efficient: (A) the single electrolytic capacitor is plug-in type for servicing convenience; (B) circuits are triple-fused (one each for power line, filament supply, high-voltage supply); and, (C) voltage regulator tubes limit surge potentials to safe values. For trouble-free performance over long periods of continuous operation in commercial service, only close-tolerance, high-quality components are used, and operated within wide safety margins, in a ruggedized receiver design.

SPECIFICATIONS

No. A-A/VP-E/3 3-bank Encoder, for Audio/Visual (silent) Paging System.

Designed for use with a Call Board, **AMERICAN'S** Audio/Visual Paging System presents an efficient means of personnel paging in hospitals, department stores, schools, hotels, factories, offices, etc.

In operation, a designated person (Telephone Operator, for instance, in a hospital) sets up on a desk-top Encoder, the call number assigned to a person (doctor or nurse) whose attention is wanted. This can be any number from 1 to 999 per bank of push-buttons. This number then instantly appears in the window of remote readout indicators or Decorders, wherever located. The called person can acknowledge the call in a variety of ways — house phone, Intercom, etc.

Encoder No. A-A/VP-E/3 shown here has two additional banks of buttons which permit two additional calls to be set up at the same time, and by automatic switching, each will be signaled, in sequence, 20 seconds after the preceding one. Or, by operating a switch, any one of the three sets of numbers can be held in view and shown steadily until acknowledged.

A jack on the front skirt, for microphone, permits audio paging, emergency instructions, etc. A pilot light indicates the "ON" condition. Encoders may be located in several offices, and Decorders at any number of remote points.

SPECIFICATIONS

Encoder No. A-A/VP-E/3, 3-bank, is a desk-top unit in metal housing. Dimen., approx. 11 x 5¾ x 14" deep. Operates on 115 V., 60 cy. A-C.

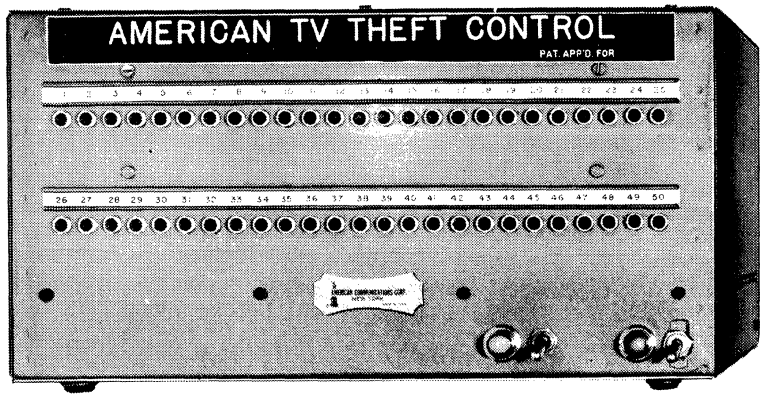
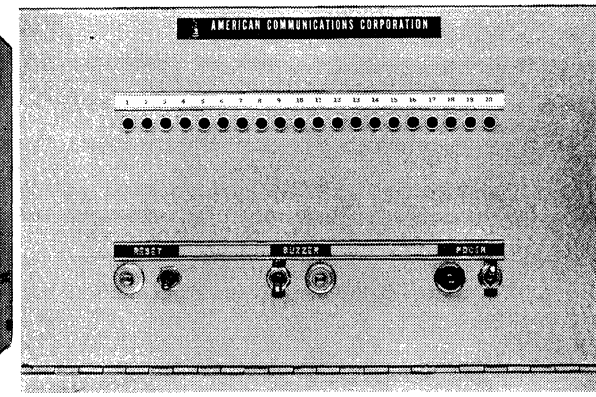
AMERICAN'S New TV-set THEFT ALARMS*



A-TA-B/50 TV-set Theft Alarm for Hotels.



NEW! A-TA-C/20 TV-set Theft Alarm for Motels.

AMERICAN'S TV-set Theft Alarm is now available in designs that meet the needs of occupancies of any size; in addition to the **Model B,** for hotels of 50 rooms or more, there is the new **Model C,** for motels of under 50 room units.

Both models operate to signal any attempt to steal the television set it protects.

In addition, **AMERICAN'S** Theft Alarm has other uses:

In Apartment Houses, to signal doorman of any attempt to illegally enter an apartment.

In Apartment Houses, so tenant can alert superintendent or doorman, in an emergency, without sounding an alarm. (A "panic button" is provided in each apartment.)

In Stores, Factories, Churches, etc., to signal any attempt to steal valuable electric appliances, tools, money boxes, etc.

Installation may be made by any electrician, following detailed instructions supplied with each System (Control Panel or Console, and Room Units). **Requires only one control wire per guest room.**

Operation: Equipment under protection (TV-set, appliance, etc.) is electronically "booby trapped" during the process of being plugged into the wall outlet. Any attempt by unauthorized persons to remove connection from wall outlet, or cut power cord, starts alarm signal. This signal is indicated at the Front Office as a flashing light, loud buzz or both, on either a desk-mount assembly (Console unit), or on a wall panel; both designs are here illustrated. The latter is more suited to hotels of several hundred rooms.

Note that the flashing light can be an existing signal system, such as **AMERICAN'S** Message-at-Desk.

There is no alarm in the guest room to alert the thief, but the Front Office signal, once triggered, cannot be stopped until Front Office attendant has operated a Reset switch (which cancels buzz and flashing light); a room indicator lamp remains lit, however, until house personnel has checked the guest room and restored the circuit to its normal alert condition.

Apartment House owners can now offer their tenants maximum security at negligible cost. Tenant is protected against an unlawful entry going undetected, can signal for help in an emergency.

Price is same, for either Console or Panel type (surface- or flush-mounted).

COLUMN SPEAKERS

NEW "MULTICOUSTIC" COLUMN SPEAKERS

Newest addition to **AMERICAN'S** Sound System equipment is the series of **Column Speakers** shown above. Due to the narrow vertical and wide horizontal dispersion pattern of these in-line speaker arrays (see diagram), approx. 90% of the sound is beamed more effectively.

Result: (a) Less sound reflection and reverberation;
(b) Less microphone feedback (howl);
(c) Less need for acoustic treatment;
(d) More audience coverage;
(e) Improved intelligibility.

Nominal line match, 8 ohms or 70 volts. Standard finish; walnut, on ¾-in. hardwood, except **A-S3D** (five 4-in. speakers), ½-in. Interior specially designed in accordance with **AMERICAN'S** famous Acoustical Labyrinth.

This is the type of service required, for example, by the newest **Discotheque** technique (pioneered by **AMERICAN** in the first such sound installation — the famous Shepheard's room, The Drake Hotel, New York).

Its unsurpassed sound quality results from a careful choice of woofer, tweeter and crossover network, combined with an acoustic system comprised of an L.F. labyrinth and H.F. multi-cellular projector assembled in a functional housing suitable for any type of decorative enclosure.

PORTABLE LOUDSPEAKERS

TR SERIES

Newcomb makes many types of portable loudspeakers for use with Newcomb Portable Combination Transcription Player/Public Address Systems. They vary in portability, directivity, efficiency, and frequency response. For example, the column speaker is highly directive, but not nearly as easy to carry as the compact S-212 Series models. The KN-200 reproducer combines widest frequency range with highest efficiency and exceptional intelligibility. The N-12 Series speakers are highly efficient, directive, intelligible and portable. All are excellent instruments, built to withstand rough treatment. Construction and finish matches player units.

ON THIS PAGE ARE SHOWN THE VARIOUS LOUDSPEAKER MODELS USED WITH NEWCOMB TR SERIES SYSTEMS

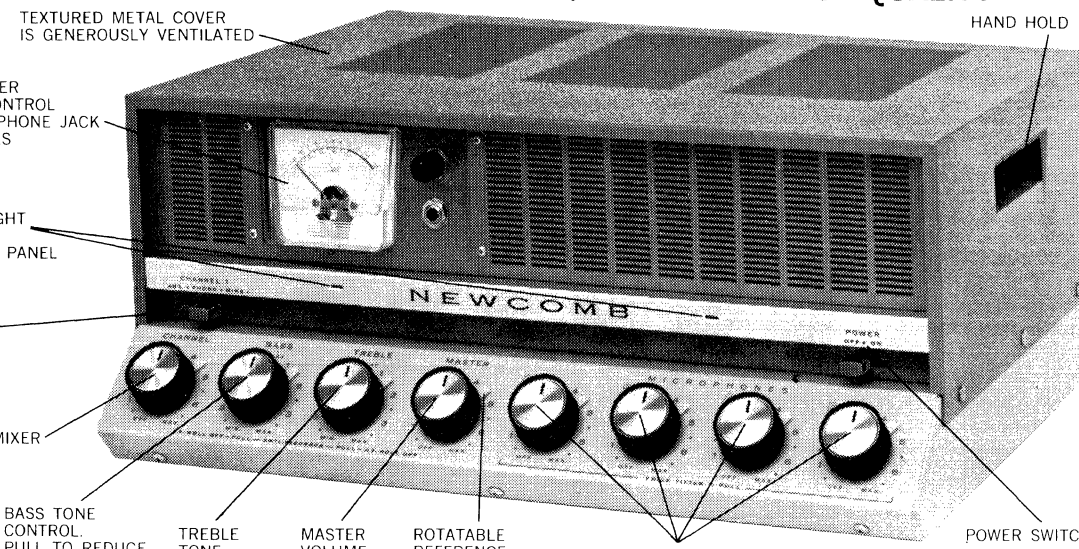
MODULAR PUBLIC ADDRESS AMPLIFIERS

CUSTOM SERIES K

MODULAR PUBLIC ADDRESS AMPLIFIERS OF THE VERY BEST QUALITY



Flexibility and performance without equal are provided by Newcomb Custom K Series public address amplifiers. "Custom" has a very real meaning in this instance. Within minutes you can assemble exactly the right combination of channels, power and features to custom fit a particular situation. You are not faced with the hours of assembly labor and testing necessary with conventional modular designs. You simply select the Newcomb Custom K mixer/preamplifier with the number of channels — three, four, or five — you need. Then choose the power amplifier module — 40, 60, or 125 Watts — needed for the location. Drop the power amplifier into the preamplifier chassis. Two plug-in connections. No soldering. Drive a few sheet metal screws and you're in business. Take your choice of a well-ventilated cabinet cover or a rack panel mount. A VU meter accessory with a phone jack is available and can be quickly added to any front end. A remote control accessory is available for the four-channel module.

Any preamplifier may be used as a mixer by itself by inserting a Model P Power Supply instead of a power amplifier module. Any power output module becomes a straight power amplifier when it is mounted in the Newcomb Model KB Booster Chassis. The Newcomb Custom K modular system is so simple and straightforward that it's a wonder public address amplifiers weren't made this way to begin with.

All modules are completely interchangeable.

The latest developments in vacuum tube technology and skilled hanc craftsmanship are united to produce superb performance. Performance of Newcomb Custom K Series amplifiers has no equal. They operate with extremely low distortion at all power levels, supply unusually high usefu power, run unbelievably cool. Vacuum tube design was chosen for the Custom K Series because no other method of amplification today provides the same combination of maximum performance, stability, reliability extended life, and outright value. With vacuum tubes, repairs are easier and faster to make, cost less.

Visually, Custom K Series assemblies are exceedingly handsome, fin ished in soft, light shades of green. The control panel is slanted for con venient operation either seated or standing, and it is well illuminated Custom K Series models abound with such refinements as movable ref erence markers on all knobs. To cut in a voice filter you simply pull the appropriate mixer knob. To kill feedback, pull tone control knobs. Wher you're out to prove what you can do, when you're putting in a model job a job you'll be proud to put your nameplate on, that's the time to build with Newcomb Custom K.

SPECIFICATIONS — K3, K4R, K5 MIXER-PREAMPLIFIERS

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. **Outputs:** 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. **Distortion:** less than ½%. D.C. on all filaments. **Frequency response:** ±1 db 20-20,000 cycles. **Bass tone control range:** —18 db to +18 db. **Low frequency roll off:** 3 db at 100 cycles, —12 db at 20 cycles. **Treble tone control range:** —18 db to +18 db. **High frequency roll off:** 3 db at 5,000 cycles, —12 db at 20,000 cycles. **Microphone impedance:** 2 megohms convertible to low impedance by Newcomb hum-free plug-in transformer. **Input volts required** for 1 volt output from cathode followers: **Mikes,** .0028 volts, gain 54* db, 2 megohms. **Magnetic,** .0022 volts, 100,000 ohms. MODEL P POWER SUPPLY takes the place of the power amplifier in the space provided in the K3, K4R, and K5 preamp modules, and supplies power to them through an octal socket. (It is never needed when a Model 400, 600, or 1250 power amplifier is used.) Model P includes a socket for a plug-in output transformer and output terminals for a balanced or unbalanced 600 ohm line. **Maximum 600 ohm output** = 0 VU. **Input** power: 117 volts, 60 cycles, 22 watts. **Wt.** 4½ lbs. **List:** (with tubes) $37.50.

SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: **Input impedance:** 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. **Output impedances:** 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. **Hum and noise:** 80 db below steady state power rating.

STEREO TAPE RECORDERS, TWO-CHANNEL AMPLIFER, SYSTEMS

TAPE RECORDERS

NEW TX-10 SERIES

CYBERNETICALLY ENGINEERED FOR INTUITIVE OPERATION ▪ SOUND ON SOUND RECORDING ▪ THREE HEADS ▪ HYSTERESIS MOTOR ▪ MONITOR BEFORE OR AFTER RECORDING ▪ ANY SIZE REELS — 3″ TO 10½″ ▪ MIXING CONTROLS ▪ POINTER-TO-POINTER METERS ▪ DIFFERENTIAL BRAKING

Essentially a machine for the perfectionist, the Newcomb TX-10 incorporates virtually all of the features professional users have said they would like to see in a portable recorder. The TX-10 is thoroughly dependable, a high precision instrument, with a transport mechanism that is probably the most foolproof, the gentlest on tape of any machine in the world. Tape movement is controlled with a telescoping joy stick. Operation is intuitive. The natural thing to do is the right thing to do. You can record sound on sound ad infinitum. For example, you first record on track one. Twist the selector and you record on track two while the signal from track one is being transferred to track two. Twist the switch again and you are adding new material to track one while the previously combined signal from track two is being re-recorded on track one. There is no limit to the number of times this can be done. Tape loads in a straight line. No pressure pads on heads. All tape guides are stainless steel. Shuts off automatically at reel's end. Head covers remove for easy cleaning and editing. A pause-edit position of the joystick permits inching tape to exact location desired. The TX-10 is a two-speed machine — 7½ ips and 3¾ ips — selected by push button with automatic speed-frequency correction. (15/7½ ips machines available on special order.) A relatively powerful, cool-running hysteresis synchronous motor and dynamically-balanced flywheel drive keep flutter and wow below .2% at 7½, .25% at 3¾, or .1% at 15 ips. The TX-10 has three heads — record, playback, and erase. 100KC bias and erase oscillators with indicators. Response is ±2 db 30-18,000 cps at 7½ ips, or ±3 db 30-13,000 cps at 3¾ ips. The TX-10 may be operated either vertically or horizontally. The dual volume indicating meters are illuminated, arranged pointer-to-pointer, show playback as well as recording levels. Too prevent accidental erasure, you must push a separate interlock button to record. The four-digit counter permits close measurements even with a 10½″ reel fully loaded with thin-base tape. There are separate "mike" and "line" input mixing controls for each channel, a balance control, a ganged volume control, a pilot light. A roomy opening on the left-hand side of the case provides for all inputs and power cord stowage. There are sockets for Cannon XLR-3-12C male connectors, easily accessible sockets for Newcomb plug-in input transformers to permit use of low impedance microphones. Outputs are on the right side of the case.
Dimensions: 12⅞″ x 16¾″ x 9½″. Weight: 36½ lbs. Power requirements: 95 watts, 117 volts, 60 cycles a.c.

PROFESSIONAL USERS NET: $750.00. Unmounted CA-133 carrying case $25.00

• 6 Separate 2-Way Conversations Simultaneously
• Selective Paging with Reply • Push-Button Channel Selector
• Start a System with any number of Masters and Staffs

Provides selective communication. Each Master is equipped with a 6 or 12-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 6 separate conversations may be held simultaneously, with 12 Masters. Masters can talk with any station in system; can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired—to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master); they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 12 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 12 stations are used, channels must be *shared*; stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

How to Determine Cable Requirements. To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For T-C-4920 and T-C-RP-5920, use two lengths of 6226 Cable; and for T-C-4930 use three lengths of 6226 Cable, etc. To connect T-C-41, T-C-20, T-C-42 or T-HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect the T-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each T-C-41 or T-C-42, follow same procedure).

TALK-A-PHONE ALL-TRANSISTOR "CHIEF REDI-POWER" MASTERS These units have all the operational features of the "CHIEF," plus the additional feature of built-in extra power (up to 20 watts) for use when and as needed. Provides additional volume for calling many stations at once, or noisy locations singly. Needs no separate power booster, which would eliminate return speech. Return speech is received at normal room volume. REDI-POWER Masters have a self-compensating amount of volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output as you call more stations at once. Use REDI-POWER Masters with "CHIEF" Masters and Staffs in same system. Add RW-10 and REDI-POWER Masters can page any group of stations with a single selector button. Paged stations can also be used for intercommunication. Operates on 110-120 volts, AC only. U.L. Approved.

ATLAS SOUND

ATLAS PAGING AND TALK BACK SPEAKERS

All speakers approved by Federal Civil Defense Administration.

The HU and CJ models listed below are all equipped with the well-known "Versalock" mounting bracket. This rigid, rugged and dependable bracket is completely adjustable on both a horizontal and vertical plane, affording "pin-point" directivity and simple secure mounting. The HU and TP horns are constructed of aluminum, while the CJ horns are molded of indestructible Fiberglas. Rugged diecastings and tough steel parts add strength wherever necessary. All models are 100% weatherproof under all climatic conditions.

HU-12N Small in size and low in cost. Excellent for low power paging and talk-back systems where limited coverage is required.

HU-15N The famous ATLAS SOUND "work horse," HU-15N is the most popular all-purpose, trouble-free speaker of its type and size.

HU-24N Similar to HU-15N. The larger horn improves low frequency response and increases over-all efficiency. For paging and talk-back systems that are also required to reproduce music.

CJ-14N A wide angle speaker with a rectangular horn opening which gives broad sound dispersion in the horizontal plane while maintaining good vertical coverage.

EC-10 The lowest priced American-made speaker designed specially for low power systems requiring limited coverage. Made possible by a breakthrough in design, materials and performance, EC-10 gives improved results and high efficiency for intercom and other applications formerly using cone speakers.

Horn sections are molded of a new, tough, all-weather, acrylic plastic and the handsome beige-brown color combination blends with any decor. The tough steel bracket is adjustable and makes mounting simple and secure. Model EC-10 is unmatched where size, weight, appearance and high efficiency combined with low cost are factors.

CJ-30N Similar to CJ-14N, except the power handling capacity is increased and the larger, wide angle horn improves low frequency response.

TP-15N One high efficiency driver unit does the work of two for low cost bi-directional coverage in long corridors and outdoors. The universal bracket mounts the dual horns at a 10° angle down or out from wall surface or pole.

ATLAS DR PROJECTORS

NON-RESONANT—STURDY—WEATHERPROOF

Atlas DR projectors are the result of many years of acoustic research. This costly engineering and elaborate tooling has resulted in projectors that are without acoustical or mechanical equal. All acoustical sound paths are clean and uniform without steps or pockets to disturb the normal function of the horn. These critical design features eliminate conditions of turbulence, frequency cancellation and resultant signal distortion. All models are equipped with a heavy duty "U" bracket. This bracket is securely fastened to a main body casting which will not fail when subjected to extreme conditions of stress, strain and vibration.

ATLAS "FULL GRIP-VELVET ACTION" MICROPHONE STANDS

NO SLIPPING—NO RATTLE—NO NOISE—NO SCRATCHING—NO WEAR

The "Full Grip" clutch is standard on all models—it offers an extended length clutch body, permitting a secure, full hand grip. The clutch mechanism of all "Velvet Action" stands is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping or sudden dropping. All chrome plated surfaces are carefully polished prior to plating to assure a uniform "Super-Chrome" wear resistant, lifetime finish. All threads on tube assemblies are individually inspected to assure a perfect fit when assembled to the base castings. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated weight is most effective. All bases include self leveling, shock absorbing base pads, plus three additional "anti-tip" points located between the base pads. All models terminate with a 5/8"-27 thread at the microphone end.

MS-10C Economy model suitable for most applications where a low cost stand is required. Offers adequate base stability for average weight microphone.

MS-12C Similar to above but increased base weight offers an added advantage. Flat design of base is modern in appearance and is finished in a dark gun metal shrivel finish. Equipped with base pads to absorb shock.

MS-11C Full chrome design. Entire stand base and upright tube assembly completely finished in "Super-Chrome." Excellent for use where fine appearance is a requirement. An excellent choice for use with full chrome plated microphones. Equipped with base pads.

MS-4 Three section telescoping microphone stand permitting a wide variation of adjustment. Can be adjusted from 26 inches to 61 inches in height. Excellent for use in schools, etc. where it is necessary to adjust the stand over a wide range of height adjustment. Minimum collapsed length offers convenience in transportation.

MS-20 DeLuxe model. Maximum stability suitable for use with heavy, expensive microphones. Large oversize tube assembly, 7/8" diameter telescoping tube, 1 1/8" diameter base tube, base diameter 12 inches. Oversize clutch assembly assures secure locking adjustment. Top adaptor included for 5/8"-27 microphones.

MS-25 Professional Microphone Stand. The ultimate in microphone stands. Features the "Safety Air Lock Cushion." This sensational feature prevents any accidental or sudden slippage of the telescoping section. If the clutch mechanism is accidently released the stand cannot suddenly crash down—thus prevents damage to the microphone from severe mechanical shock. The telescoping section is at all times "cushioned on air" and the controlled escapement of air will only permit a slow smooth and quiet collapse of the stand. Base finished in a combination of chrome and shrivel. Heavy duty tube assembly, 1 1/8" and 7/8" combination—5/8"-27 top adaptor.

MS-11S - MS-12S Automatic "Sleeve Action" models. A fully automatic means of adjusting the height of the stand. A slight downward pressure on the "Sleeve Action" control permits the telescoping section to be lowered—cannot change its position without a deliberate pressure on the actuating sleeve control. Two models full chrome base or shrivel finish.

CS-1 Fully collapsible, portable stand quick and simple to set up. Collapsible to a minimum overall length of 23 inches.

CS-52 A unique three-legged floor stand which combines handsome design with maximum stability. The cast iron base, with base pads on each leg, is finished in dark gun-metal shrivel. Standard full chrome upright tube assembly. Two piece base disassembles easily for compact handling.
Packed: One complete stand packed in a single carton, suitable for reshipment.

CS-42 Similar to CS-52 in design, except that base is readily collapsible for portable use or convenient storage.
Packed: One complete stand packed in a single carton, suitable for reshipment.

CS Type Demountable Microphone Floor Stands—with full grip—"Velvet Action," fully collapsible—quick and simple "Come Apart" base design. This new and revolutionary design in microphone stands is ideal for fixed as well as portable applications. Excellent for use when it is desired to contain the stand within the amplifier or speaker carrying case. The stability of the assembled stand is equal to many types employing heavy cast iron base construction. The base legs are easily removed to permit minimum size, lightweight transportation. The spring lock leg-holding mechanism of this ingenious design offers a quick and simple "Come Apart" feature. No tools or screw fastenings are required to hold the base assembly together. No small parts to become lost. The self-leveling legs are chrome plated, tipped with skid-proof rubber shock absorbent bumpers —eliminates vibrational conductivity . . . protects polished floor surfaces against damage.

GENERAL PURPOSE MICROPHONES

Unidirectional Line Microphone

MODEL 644 SOUND SPOT® — Another Electro-Voice revolutionary development, the Sound Spot Model 644 is a combination cardioid and distributed front opening* instrument, making it the most directional P.A. microphone ever. The Model 644 has the farthest front pickup, or better than 2.5 times the working distance of pressure types. Work close or far away without change of frequency response.
Cancellation from the rear and sides exceeds 20 db above 700 cps giving practically complete rejection of unwanted sound. Cardioid below 700 cps. This feature gives extremely high rejection of random noise. Reverberation and feedback are vastly lower than with any other P.A. microphone, allowing much greater leeway in loudspeaker placement.
The effective front acceptance angle is 45° each side of center, providing best isolation of individual performers. The Model 644 is 9 db better on the reduction of wind noise and has far less response to shock than most other microphones.
Frequency response is smooth from 40 to 10,000 cps. Acoustalloy® diaphram. High output: —53 db. Dual high and low impedance selected by changing one tap on MC4M cable connector. The case is high-pressure die-cast zinc with ¾" aluminum tube; satin chrome finish. Rear diameter 2 5/16", length 16". Cable is 16'. Weight, 2 lbs. 9 oz. Net Each.....**$66.00**

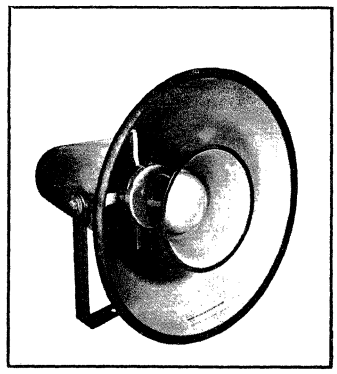
FC100

Projector Horns

Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

EXCLUSIVE COMPOUND HORNS permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.

MODEL FC100—Similar to the famous CDP®, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn. Large horn is fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn — cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 cps. Mouth size 10½" x 20½", depth (less driver), 20". Net Wt. (less driver), 10¾ lbs. Shpg. Wt., 12¼ lbs. Net Price.....**$30.00**



AC100

MODEL AC100—Concentrating version of CDP®. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 cps. Diameter, 21"; depth (less driver), 21"; Net Wt. (less driver), 11 lbs. 6 oz. Shpg. Wt., 13½ lbs. Net Price....**$33.00**

REENTRANT HORNS provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high-frequency losses often encountered in reentrant horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die-cast mounting plate plus precision die-cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Electro-Voice Reentrant Horns accept any standard driver with 1⅜"-18 threads.

© U.C.P., Inc.

MODEL FR150—Reentrant Horn. Medium-angle low-cost rectangular horn provides good coverage at low cost. Virtually indestructible fiberglass horn has Mesa Tan color molded in. Adjustable mounting angle allows best coverage. Can be stacked for multiple speaker applications. Ideal for car-top installation or wherever low silhouette is needed, and where bass response cannot be sacrificed. Accepts Electro-Voice convertible drivers or any standard driver with 1⅜"-18 thread. Specifications: Low-frequency cut-off, 150 cps; taper, 150 cps; air column length, 45"; sound distribution, 70° x 100°; mouth size, 10½" x 20½"; depth (less driver), 21"; Net Wt. (less driver), 9½ lbs. Shpg. Wt., 12 lbs. Net Price.....**$23.40**

MODEL AR150—Reentrant Horn. Round concentrating horn for maximum penetration at lowest cost. E-V ring reflector plus precision new exponential design contributes to widest range yet achieved from this horn type. Smoother curve results in high intelligibility, and remarkably natural voice and music quality. Rubber edge-damping ring eliminates resonances. High-efficiency design allows more useful volume from driver over entire range. Accepts Electro-Voice Convertible drivers or any standard driver with 1⅜"-18 thread. Specifications: Low-frequency horn—cut-off, 150 cps; taper, 150 cps; air column length, 41"; sound distribution, 85°; diameter, 21"; depth (less driver), 17". Net Weight (less driver), 6½ lbs. Shipping Weight, 8 lbs Net Price....**$23.40**

Versatile Convertible Drivers

Now, for the first time, here are drivers that can be used interchangeably in compound or reentrant horns. Used on either type of horn, the new Electro-Voice Convertible Drivers feature highest efficiency available. Increased power handling plus extra increased efficiency make the 40- and 50-watt drivers uniquely useful where high power at minimum cost is essential. The high efficiency of all E-V Convertible Drivers is achieved without resorting to "peaked" response which may increase loudness, but does reduce intelligibility. The smooth response of these drivers insures most natural reproduction of voice and music for more satisfying quality with vastly reduced feedback problems and greatly increased tonal range. Double flux ceramic magnets provide long-lasting high efficiency in entirely new low-loss magnetic circuits. Edgewise-wound ribbon voice coils give 18% more efficiency.

Diaphragm Replacement Kits allow easy field maintenance of E-V Drivers.

The drivers are rugged and weatherproof; conversion to either reentrant or compound use can be made instantly in the field. Voice coils are also field replaceable, thus reducing repair costs to a minimum. E-V Convertible Drivers are available with 16-ohm voice coils or with built-in 70.7-volt line constant voltage transformers. This entirely new design concept gives better performance at minimum cost, making E-V Drivers your best buy.

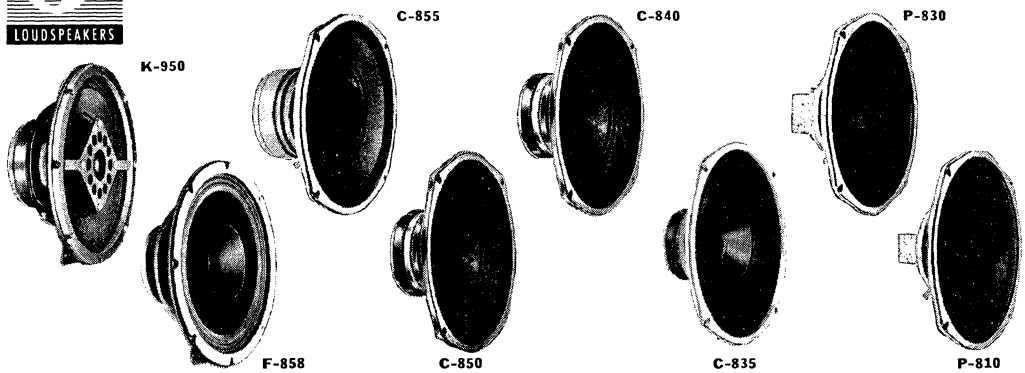
8" SPEAKERS FOR DISTRIBUTED SOUND

VALUE ENGINEERED FOR LOWEST INSTALLED COST



This new line of Jensen 8-inch Professional Series loudspeakers is specially designed to meet the exacting rigorous demands of commercial sound service. The 8-inch size is ideal for the majority of all distributed sound systems giving more than adequate low frequency range with a minimum of enclosure and mounting complications.

A **complete line** of speakers **value engineered** for lowest **installed cost** with such features as the handy 10-pack, preattached transformers, exclusive solderless connectors, weather and corrosion resistant designs . . . and many more. A wide selection of models to meet every need—from the lowest cost highly competitive application to the most sophisticated, highest quality system.

Four conventional type speakers with varying sensitivity and power rating (magnetic energy) with the typical 90° coverage angle. Two models have dual cone radiating system with 95° coverage angle and unusual high frequency range. Another basic model is an 8" coaxial with 110° coverage angle and unusual frequency range and smoothness for the finest quality and intelligibility. This 110° coverage angle provides approximately **twice** the coverage area, so **fewer** are required for a given installation. Still another model is the unique Jensen FLEXAIR* with dual-cone radiator; super-low resonance for those small acoustic enclosures and back boxes; big-speaker lows the remarkable h-f range to match.

PREATTACHED TRANSFORMERS

The eight basic models mentioned above are all available with preattached 25-volt or 70.7-volt "constant voltage" transformers, Models 25CV4 or 70CV4. Factory attachment insures lower cost to the end user.

AVAILABLE IN HANDY 10-PACK

All of these speakers are available at added savings and convenience bulk-packed ten per carton (with or without transformers). These handy 10-pack cartons have individual sleeves for each speaker thus giving speaker protection of odd lots until actual installation.

KWIKON* INSTANT CONNECTORS

Simply twist bare ends of two 12" input leads supplied for each speaker to incoming signal cable leads, insulate with wire-nut or tape. Slide sleeve clips onto input terminal lugs of speaker or preattached transformer as speaker assembly is raised into place. KWIKON* instant connectors also provide simple fast power tap readjustment on transformer. *T.M.

"CONSTANT VOLTAGE" TRANSFORMERS

Specially designed for use with the popular "constant voltage" distribution systems. Primary (input) windings are center-tapped for balanced-to-ground input circuits or for special circuit needs. Tapped secondary windings provide adjustment of power to the 8-ohm speaker in 3 db steps from ⅛ watt to 4 watts. Nominal core size ⅝″ x ⅝″. Two 1/16″ dia. mounting holes on 2⅜″ centers. Available separately or preattached to these special 8-inch speakers.

JENSEN CALSTAR* COLUMN SPEAKERS

CALSTAR Controlled-Angle Lobe-Suppressed Twin-Array Reproducers are the result of an exhaustive study of directional sound radiation by Jensen engineers. In a CALSTAR column, an array of small woofers, covering the lower frequency range, is combined with a shorter array of tweeters covering the high frequency range (where the polar sharpening would otherwise become severe). Next, the signal distribution to each element is "tailored" so that the effective array length decreases as the frequency increases. The final result is a column design in which the vertical coverage angle is unusually constant for all frequencies and therefore exceptionally uniform sound quality and high speech intelligibility are achieved throughout the audience area. The exact signal distribution at each frequency provided by the pattern shaping networks has also been chosen to suppress unwanted side lobes.

H-970 COAXIAL

with Compression-Driver Horn-Tweeter.

Here at long last is a genuine coaxial loudspeaker in 8-inch size with compression-driver horn-tweeter. Tweeter horn passes through the woofer core terminating in a circular horn inside and concentric with the woofer diaphragm. This design thus yields a circular (symmetrical) radiation pattern at all frequencies ideal for higher-power high-ceiling distributed sound. Excellent speech intelligibility with high quality reproduction for industrial areas, heavy-duty portable, and central speaker system use.

MODEL ID-20 (20 watts) For speech and music systems requiring moderate sound power output, and where performance with economy is a primary consideration. Designed to deliver maximum output, the ID-20 utilizes its efficiency to the best advantage, producing a substantial "punch" with clear, penetrating sound.

MODEL ID-30 (30 watts) Redesigned version of the world famous MA-25—ideal for installations requiring single medium power units or multiple driver/horn arrangements. The ID-30, with its unusually wide upper midrange response (up to 7500 cycles), produces musical balance and noise penetration far in excess of higher-cost competitive models. Completely weatherproof with tropicalized 2" voice coil and breakdown-proof linen base diaphragm. A top value!

MODEL ID-40 (40 watts) Latest, maximized version of the famous, earlier Model SA-HF, often referred to as the "workhorse" of the sound industry, and widely used by high fidelity manufacturers and audio hobbyists as well. Extended high frequency response and excellent efficiency assure an essentially uniform response characteristic for pleasing, natural reproduction of speech and music, while delivering that extra "punch" needed to cut through heavy noise. Tropicalized and weatherproofed, the ID-40 can be relied upon to give continuous top-flight performance under adverse weather conditions.

MODEL ID-40T (40 watts) Offers the same power capacity, efficiency and frequency response as the ID-40, and incorporates a built-in line-matching transformer. The transformer terminal plate is inside the rugged, die cast aluminum housing; entrance is made through an exclusive watertight dural gland nut, assuring positive weatherproofing after connections have been made. Terminals are labeled in impedances and in wattage consumed on "constant voltage" lines. Transformer impedances: 45/122/250/500/1000/2000 ohms. 70 V. line power taps: 40/20/10/5/2.5 watts.

ID-60 (60 Watts) The premium compression driver in the world famous University line. Ideally suited to applications requiring the greatest power handling capacity, maximum efficiency, widest frequency response and rugged construction that will withstand a lifetime of hard use. Use of rugged outer case assures utmost durability even when abused or in hazardous environment. Water tight voice coil terminals are located in the base of the housing. Without question, the ID-60 is the finest wide range, high power driver ever offered.

MODEL ID 60T (60 watts) Similar to the ID-60, but with high-impact plastic outer-case, the ID-60T includes a husky built-in line matching transformer, with its terminals immediately available at the base of the driver housing. Ideal for rental work requiring repeated set-up and dismantling of equipment, and for semi-permanent systems where changes in the number or location of speakers are likely to affect line impedance requirements. Transformer impedances: 16/80/165/250/500/1000/2000 ohms. 70 volt line power taps: 60/30/20/10/5/2.5 watts.

ID-75 (75 Watts) The University Model ID-75 is the newest offering in high power drivers in the P. A. industry. This 75 watt model is designed for use in either high-power electronic siren or public address applications. A large super power W shaped Alnico VB magnet, exclusive with University, virtually eliminates reluctance losses normally present in other designs. This W shaped magnet gives the lowest leakage and maximum gap flux density resulting in peak electro-mechanical efficiency. The ID-75 is, without a doubt, the finest high power driver made for electronic siren and special purpose high-power P. A. applications.

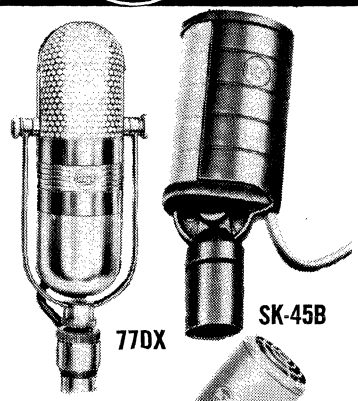
Broadcast Quality MICROPHONES



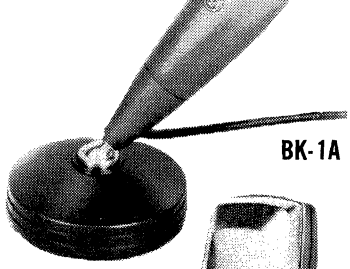
POLYDIRECTIONAL RIBBON MICROPHONE—77DX

The standard quality microphone of the broadcast industry, the RCA Type 77-DX, is available in two models; one with a low-gloss finish for TV, the other a satin chrome and gray enamel finish for AM and FM. The 77-DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be utilized. The 50 to 15,000 cycle frequency response of the 77-DX makes it suitable for every high fidelity broadcasting and recording application. The low-hum pickup level (−128 dbm) makes the 77-DX useful in high-hum areas. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30 to 150 ohm output impedance. The effective output levels are −50 dbm in the bidirectional pattern, −53 dbm and −56 dbm in the uni- and non-directional patterns (EIA ratings, −144 db, −147 db and −150 db respectively.

This microphone mounts on a standard ½-inch pipe thread which can be adapted to ⅝-inch-27 thread. The 77-DX is supplied with a protective cloth zippered bag, and 30 feet of three conductor shielded cable, less plug. Overall dimensions are 11½ inches long, 3¾ inches wide and 2¼ inches deep.

77-DX Satin Chrome Finish (MA-2311) **$206.00***

77-DX Low Luster Gray Finish (MA-2312) **$197.00***

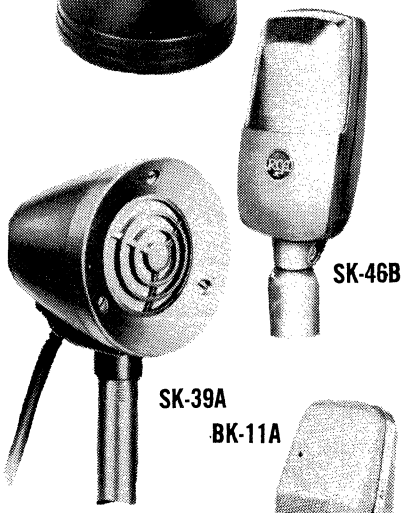


BI-DIRECTIONAL RIBBON MICROPHONE—BK-11A

All the advantages of the famous 44-BX microphone have been combined with the latest developments in ribbon microphone design to produce the new BK-11A general purpose microphone. In the studio or at indoor remotes, whether a simple interview program or full orchestra pickup, the bidirectional characteristics and excellent frequency response (30 to 15,000 cycles) make the BK-11A an extremely useful production tool. The BK-11A has an effective output level of −56 dbm @ 1000 cycles (EIA rating, −147 db). The output can be connected for 30, 150, and 250 ohm operation. A three position switch permits selection of desired frequency ranges for voice and music.

The BK-11A has been designed for use with the inexpensive MA-2306 desk stand, and it can also be used with any standard ½-inch pipe thread desk or floor stand. Thirty feet of three conductor cable is supplied without a connector.

BK-11A (MA-2316) **$131.25***



UNIAXIAL RIBBON MICROPHONE—BK-5B

The BK-5B is a high-quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. The BK-5B makes an excellent control room microphone when mounted on an adjustable microphone arm. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardiod pattern. Frequency response from 50 to 15,000 cycles permits using the BK-5B for all types of high fidelity voice and music pickups. The effective output level is −56 dbm (EIA ratings, −150 db). The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. The low-luster umber gray finish makes it ideal for TV.

It is supplied wih thirty feet of three conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has a ⅛-inch straight pipe thread.

BK-5B (MA-2314) **$146.50***

DIRECT PRESSURE LAVALIER MICROPHONE—BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3 ounce unit is 2 1/16 by 1 5/16-inches, and its effective output level is −67 dbm (EIA ratings, −158 db). Wide range frequency response (80-12,000 cps) permits using the microphone for all speech applications. The 250 ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections. Hum pickup is very low (−112 dbm).

The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of three conductor cable is supplied, less connector.

BK-6B with lanyard and fastener (MA-2315) **$86.00***

BI-DIRECTIONAL RIBBON MICROPHONE SK-46B

The SK-46B is designed for high quality indoor use. It has excellent frequency response and bidirectional pickup characteristics. Output impedance is 200 ohms, but it may be reconnected to produce a 15,000 ohm output. Effective output level is −58 dbm at 250 ohms (EIA rating, −150 db) or −60 dbm at 15,000 ohms. Dependable performance as well as attractive styling make the SK-46B an ideal choice for applications requiring an economical high quality microphone. The SK-46B has a ⅝-inch−27 mounting thread and is supplied with 25 feet of two conductor cable (less connector).

SK-46B (MA-2319) **$49.00***

NON-DIRECTIONAL PRESSURE MICROPHONE—BK-1A

Ideal for outdoor use or wherever constant handling is required the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. The pressure actuated microphone provides uniform response from 60 to 10,000 cycles. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional the horizontal position is semidirectional. The output impedance is 250 ohms, but 30 and 150 ohm connections are included. Effective output level of the BK-1A is −52 dbm (EIA ratings, −148 db) while hum pickup is below −102 dbm.

The BK-1A may be mounted on any type stand having ½-inch pipe thread and is perfect for use with the MA-2306 desk stand. Thirty feet of three conductor cable is supplied, less connector.

BK-1A (MA-2313) **$73.50***

NON-DIRECTIONAL PRESSURE MICROPHONE—SK-45B

Ideal for talk-back, cue, and public address use, the rugged lightweight SK-45B microphone offers good voice reproduction. This dynamic microphone is essentially nondirectional with a −56 db output level (EIA rating, −147 db) when connected for a 150 to 200 ohm balanced output, and −58 db when specially connected for a 15,000 ohm output. Response from 70 to 12,000 cycles makes it excellent for announce work. Mounting with any ⅝-inch−27 fixture thread permits the use of low cost stands. Finish is low gloss gray, and the SK-45B is supplied with 25 feet of cable less connector.

SK-45B (MA-2318) **$45.00***

NON-DIRECTIONAL PRESSURE MICROPHONE—SK-39A

Cue and talk-back applications are perfect for this inexpensive dynamic microphone. The SK-39A is rugged and relatively insensitive to mechanical shock and wind. Its plastic diaphragm makes it impervious to moisture and rain. Output level is −55dbm (EIA rating, −150 db). The SK-39A may be used with amplifiers having a 250 ohm input. The umber gray unit may be mounted on any ⅝ inch−27 fixiutre thread. The 15-ounce microphone is supplied with 25 feet of two conductor cable (less connector).

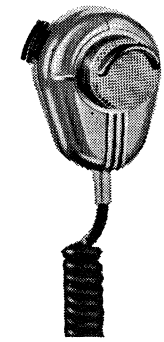
a new breakthrough in microphone design . . .

SHURE MODEL 488 NOISE-CANCELLING MICROPHONE!

Outperforms and obsoletes all others . . . confirmed by laboratory and field comparison tests!



Provides highly intelligible speech communication in mobile and fixed-station use where high volume background noise is found, such as airplanes, helicopters, motorcycles, trucks, fire engines, power boats, sporting events, drop forges, press-rooms, engine-rooms, factories. The 488 incorporates the patented Shure Controlled Reluctance cartridge into a distance discriminate microphone that effectively cancels background noise to permit transmission under conditions that would be impossible with any other microphone. Correct placement of microphone for close-talk use is assured by convenient rubber lip-guard. Rugged, impact-resistant "Armo-Dur" case is lightweight, easier to handle in extremes of temperature. Four versions of the 488 are available: 488A — high impedance; 488B — low impedance; and 488C and 488T — transistorized for direct replacement of carbon microphones (488T FAA Certified for Aircraft applications). All models equipped with coiled-cord and long-life heavy-duty push-to-talk switches. Field-testing these blade-type switches confirms their operating life rating to be in excess of one million cycles.

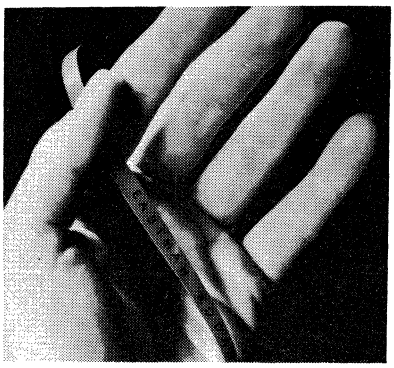
Eastman Kodak Sound Recording Tapes

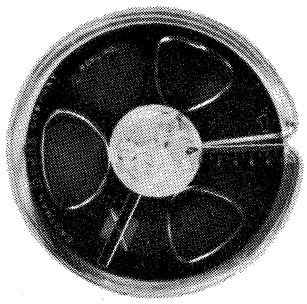
INTERNATIONAL RESISTANCE COMPANY



EASTMAN KODAK MEANS QUALITY. The only professional quality tapes available at popular tape prices. Two great types . . . Professional Low Print-Through and Professional High Output. Both are lifetime coded to identify the brand and provide convenient indexing.

CONSISTENT UNIFORMITY due to Eastman Kodak's exclusive emulsion process, consistent high quality is maintained from batch to batch and from reel to reel.

NO STRETCH. New DUROL® base material is the Eastman Kodak's cellulose triacetate that is smooth, tough and durable. Breaks are clean . . . splices are made quickly, easily with minimum program loss.



NEW BINDER MATERIAL. Coatings of "R-type" binder give a smoother, tougher recording surface that reduces tape noise and distortion. It is extremely abrasion resistant, preventing oxide build-up at the recording head.

THREAD EASY REEL loads fast and easy. Rugged one-piece construction has indexing scale, built-in splicing jig and handy writing surface for titling or identification.

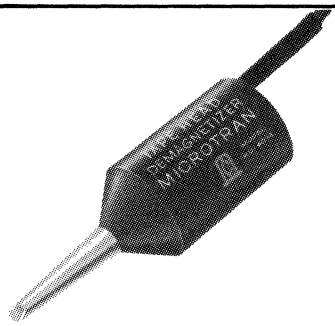
A MUST FOR STEREO RECORDING
Most stereo recorders do not provide facilities for pre-erasing both tracks

Tape Head Demagnetizer — Model HD-40M *(For Tape Recording Heads)*



Permanent magnetizing of recording heads during normal use of tape recorders is a common occurrence. Magnetized heads cause high noise level and harmonic distortion.

The HD-40M Head Demagnetizer, when properly used, removes any residual permanent magnetism from the heads. It consists of a heavy duty alternating current electromagnet with an extended pole piece designed for easy access to the recording heads of most tape recorders. When energized, contact of the demagnetizer pole piece with the pole tip of the recording head causes the head to be saturated by an alternating magnetic field. Gradual removal of the head from this saturating field neutralized any residual permanent (DC) magnetism in the recording head.

- Removes permanet magnetism
- Reduces noise level
- Reduces harmonic distortion
- Improves signal to noise ratio
- Insures high frequency response
- Reduces hum of tape head
- Special finish on pole piece prevents marring recording head surfaces
- Rating 117 volts AC, 1 AMP.
- FINISH: High impact molded epoxy
- SIZE: 4″ Long x 1¼″ Diameter
- WEIGHT: 7 ozs.
- Model HD-40M—USER NET: $6.15

A-M Akro-Mils Parts Cabinets

DESIGN YOUR OWN PARTS WAREHOUSE. Akro-Mils' totally new concept in small item storage for the 60's enable you to design your own small parts warehouse . . . exactly to YOUR storage needs! These space saving, time saving cabinets with the built-in look reduce your storage costs and promote greater labor, inventory and production efficiency.

Completely versatile, these compact modular cabinets can be used individually on any flat surface . . . or stacked in any desired combination of cabinets. They can be hung from a wall or integrated into any standard shelving set-up. You can save the cost of shelving by stacking.

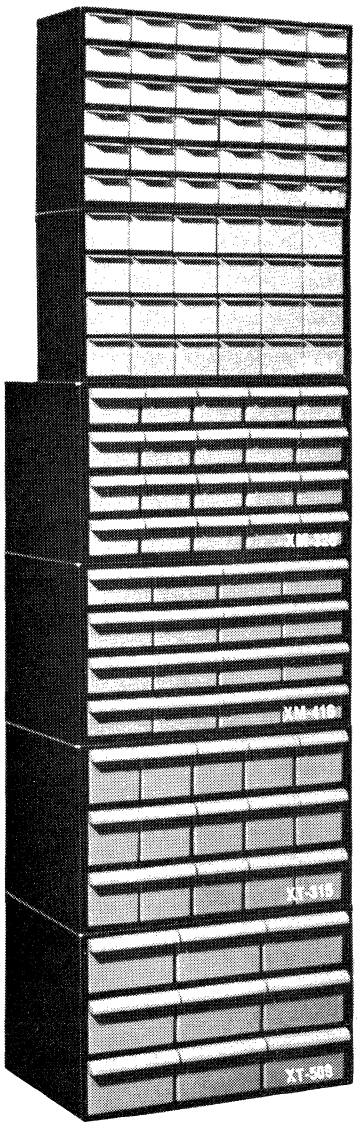
Securely welded of steel, cabinets are constructed to last a lifetime of daily use. Baked-on gray finish won't chip or rub off.

Drawers are available in two different materials. The see-thru, ordinary strength molded drawers give you instant visual inventory control. The hi-impact molded drawer is the strongest drawer made, is virtually indestructible, actually surpasses any other material in strength and durability . . . is not transparent and is finished in permanent, granite gray color.

All drawers have an ingenious system of vertical, horizontal and criss cross dividers making an infinite variety of compartments available. Rust and corrosion proof, open and close smoothly, operate quietly, dent proof, safety feature . . . no sharp edges to cause cuts or scratches, non-toxic, non conductive, resistant to most chemicals including acids, easy to clean one-piece seamless construction, 60% lighter than steel yet drawers cannot twist or spring out of shape.

Dividers have lock-tight dovetail design (except XJD-1, JD-1, XM-3 and M-3 drawers) to prevent drawer sides from spreading, easily moved to new position if desired. Dividers can be placed lengthwise, cross-wise or criss-crossed to provide any size or shape of compartment. Dividers fit into grooves to prevent creepage of parts into adjacent compartment.

Both drawer materials come in the same six sizes and the six different cabinets fit both style drawers. Cabinets are made to contain 9, 15, 16, 20, 24 and 36 drawers, see table below.



COMPLETELY FLEXIBLE . . . Six different cabinets — six different drawer sizes. Can be stacked in any combination.

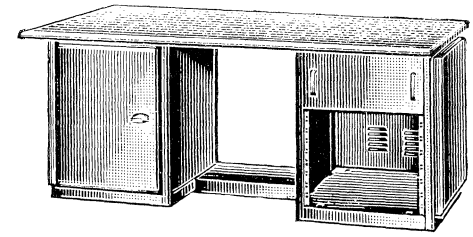
CABINET ASSEMBLIES AND AMATEUR ACCESSORIES

BUD CONSOLE ASSEMBLIES

Variety of panels, sides, doors, pedestal, table tops and drawer permit easy assembly of a variety of console units, custom made to individual requirements. Typical basic unit would consist of one pedestal, an end pedestal, three or more panels, a door, a table top and a foot rest as illustrated. Many variations of this basic design may be made, and additions or changes in design can be accomplished at any time. Because the system is sold in parts, it offers the user the highest versatility in designing or expanding units as needed.



BASIC PEDESTAL

Consists of top, bottom and four panel-mounting channels drilled and tapped to accept standard 19" panels on each of four sides. Bottom is slotted so that sides or doors may be installed on any side. Three knock-out holes provided on each of two sides for use in assembling pedestals in series. Channels will support 200 lbs. suspended between them; bottom will support 500 lbs. Bottoms have recessed mounting brackets for hidden caster attachment. Shipped knocked-down, with necessary hardware. **Size:** 22" w. x 22" d. x 29 13/16" h.

END PEDESTAL

May be used as a housing or as a support. Panel mounting rails are drilled and tapped for mounting panels on each of two sides. Accepts full size solid or louvered panels, ball-cornered doors or sides. Base has hidden caster mounting supports. When used, No. CT-2206 table top is required; eliminates the need for a second CP-2200 pedestal. **Size:** 22" w. x 5" d. x 29 13/16" h. inside.

PANELS

Full-sized panels may be used to enclose the openings on any side of either of above pedestals. Available either solid or louvered. Louvered panels can be positioned with louvers pointing down or up, inside or outside the pedestal. **Size:** 24 15/32" h. x 19" w.

BALL-CORNERED SIDE

Can be used to enclose any side of either of above pedestals for an enhanced appearance. Attach by tongue and slot arrangement at the bottom; and, two screws at the top. Quickly removable from exterior of pedestal for service or inspection. Provide sufficient clearance for installation over knobs and dials. **Size:** 25 1/16" h. x 20 1/4" w. x 1 1/16" d.

BALL-CORNERED DOOR

Unique hinge and locking arrangement designed so that door may open from right or left side. Attaches to any side of either pedestal with sufficient clearance for knobs, and dials. **Size:** 25 1/16" h. x 20 1/4" w. x 1 1/16" d.

TABLE TOPS

Made of 16 ga. steel and available in three lengths. Adjustable from front to back in three positions to allow overhang as desired. Attach to the pedestals by means of brackets welded to underside of top. **Size:** 30" w. x 1 1/16" thick.

FOOT REST

Joins two pedestals or one pedestal and one end pedestal, depending on the size top used. Adjustable in two positions, front to back. **Size:** 22" l. x 10" w. x 2 3/8" thick.

CONSOLE DRAWER

Fits into pedestal in any position from top to bottom. Slides easily on nylon rollers. Capable of supporting heavy loads. Drawer extends to full depth of pedestal. Easily removable slides fasten to mounting channels in pedestal; stops prevent drawer from falling out. **Size:** 16 3/4" w. x 19 1/8" d. x 6 7/16" h., inside.

LMB PRESENTS SOMETHING NEW IN CHASSIS —

THE CHASSIS WITH THE CAP COVER AS ORIGINATED BY LMB

Built with the new original LMB popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.
The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

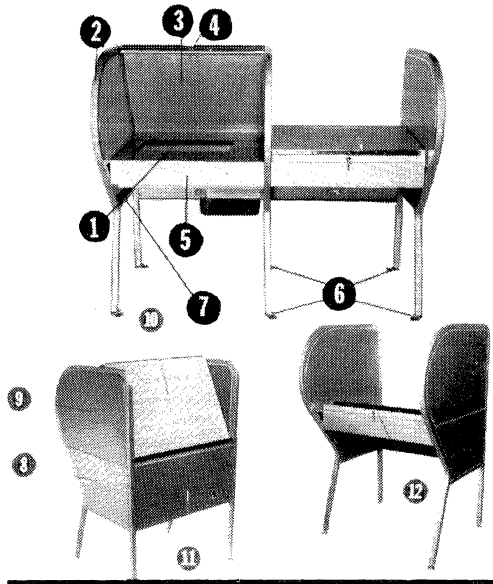
ALL METAL LANGUAGE LABORATORY FURNITURE



METAL WORKS new design in Student Booths brings you "tomorrow's booth" today! Featured below are three views of the 500 Series. These booths are designed to minimize noise entering the booth and prevent the students' response from adding to the general noise level. Designed to meet today's needs in an ever expanding educational program, they can be added to as funds permit, or as the language program expands, by simply bolting on additional units, consisting of only 1 leg and deck. They are adaptable to flush mount any tape recorder. Design is simple, yet unique in that the curved one piece leg conformation does away with sharp corners. No part of the booths protrude into the aisle leaving all aisle space clear for passage. 'K' leg permits easier entry and discharge from booth.

WHY METAL BOOTHS ARE BEST FOR SCHOOL USE

Metal Booths provide an important safety feature, insuring that all accessible surfaces are at ground potential. Metal Booths also provide better head dissipation permitting equipment to run cooler, and are less resonant than wood or plywood. An installation providing less mechanical hum from deck. Complete information about Metal Works all metal language laboratory furniture furnished on request.

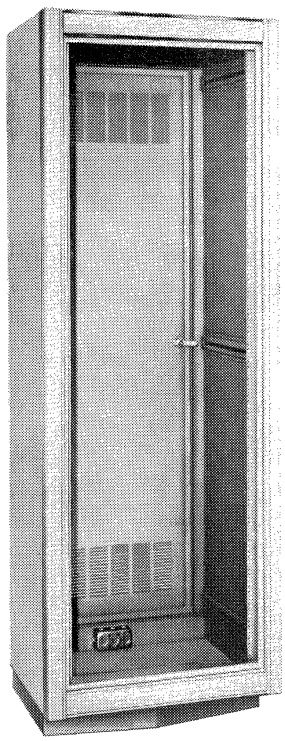
equipped with detachable
side panels.
(Recessed base is optional)

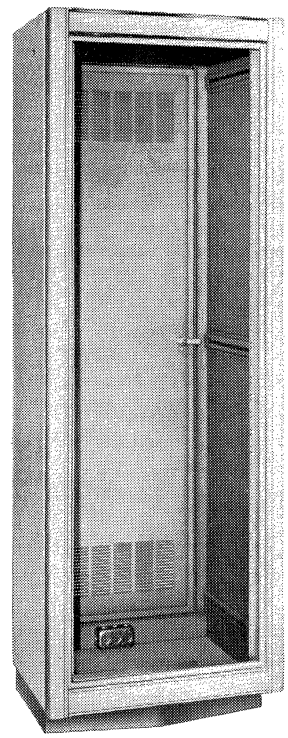


SERIES "PX" RACKS
With Rear Door Only
(Recessed base is optional)

Every **Par-Metal Modular Cabinet Rack** is securely welded into an integral unit, except where needed for purposes of adjustment or accessibility. No metal screws, clips, or similar devices are used. Every care has been taken to facilitate your assembly problems with a minimum of parts, an efficient utilization of space, and rapid accessibility to interior components.

Although smartly styled, there has been no sacrifice in rugged construction. The same sturdy frame is used in our "PL" & "PR" series providing a solid foundation for maximum loading under severe conditions. Series "PL" may be combined with our console units listed on Par-Metal Pages 9 thru 13 to solve your equipment housing problems.

DESIGN: All sizes listed may be obtained with conventional solid side walls, or with open side walls and detachable side panels. Slide shields for use between racks are also available.



SERIES "PR" RACKS
With Rear Door Only
equipped with detachable
side panels.
(Recessed base is optional)

DIMENSIONS: Racks are available for 19", 24", or 30" wide panels. Cabinet heights are 48⅛", 67⅜", 77⅛" and 83⅛"; depths available are 18" or 24".

MODULAR GROUPS: All models may be joined into modular groups; cabinets of the same height, in varying panel widths, with and without front doors, may be intermixed; Series "PL" racks may be combined with our console units.

•

MID-RAIL MOUNTING OF PANELS: The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Additional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.

•

VERTICAL SIDE SUPPORTS: These supports provide a simple method for supporting chassis and other equipment in the racks. The means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical side supports also facilitate the installation of special sliding devices.

•

ADJUSTABLE FLOOR LEVELERS are supplied with all racks as standard.

They may also be modified with our standard dies for making openings, louvers, circular holes, etc., in sides, tops, bottoms and doors of racks.

FACILITIES for special ventilation problems and other custom requirements are available. A few examples in common use are shown on **Par-Metal Page 3.**

All of our products incorporate the same exacting standards of quality and uniformity which we have maintained for over three decades. If you have a specific problem, do not hesitate to consult us.**Personalized and interested engineering assistance is always available.**

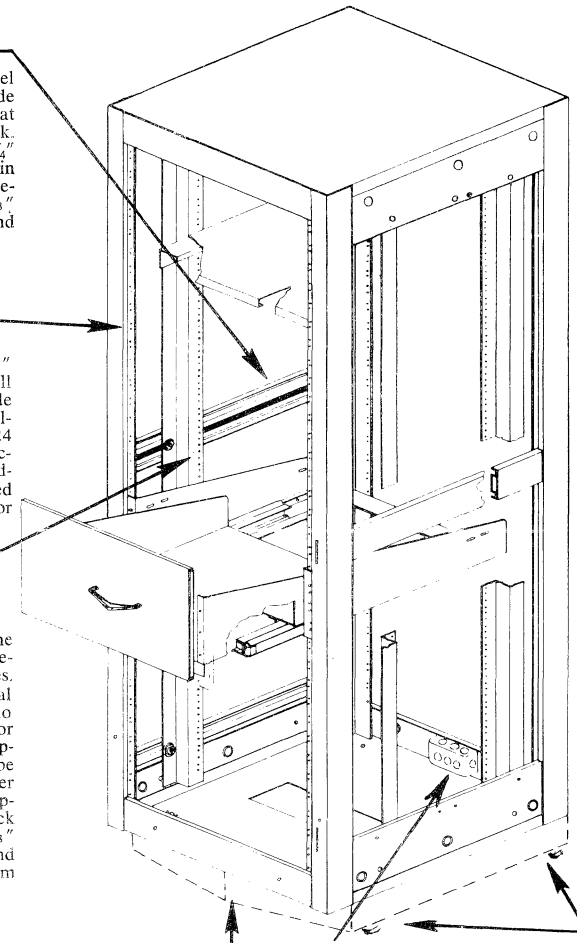
DETAILS OF CONSTRUCTION AND ASSEMBLY

RACK CONSTRUCTION:

The frame shown is used on series "FL", "FR", "PL", and "PR" racks. The top and bottom is made from 7/64" steel. The four uprights are also 7/64" steel, and have multiple-formed angle bends to insure rigidity. Series "PX" and "FX" racks are similar, except that the solid side walls are made from 1/16" steel. The entire assembly is securely welded to form an integral unit.



• **BOLT RETAINER RAILS:**

To these are bolted the panel mounting angles and vertical side supports, which may be located at any position from front to back. These rails are made from 7/64" steel, and are rigidly welded in place. Angles and supports are securely fastened to rails with 3/8" diam. steel bolts, lock washers, and hexagon nuts.

• **PANEL MOUNTING ANGLES:**

They are made from 1½" x 1½" x 3/16" thick structural steel. All holes are die punched to provide accurate spacings with close tolerances; holes are tapped 12/24 thread on 5/8"-5/8"-½" universal spacings for standard rack panels. Additional angles may be purchased for mounting terminal blocks or other devices.

• **VERTICAL SIDE SUPPORTS:**

These supports are fastened to the same bolt retainer rails used for securing the panel mounting angles. Holes are 5/8"-5/8"-½" universal spacings tapped 10/32 thread, to provide maximum adjustment for side mounting brackets and equipment shelves. They may also be used for attaching slides or other custom made brackets. The supports are made from 7/64" thick steel, locked in place with 3/8" diameter screws, lock washers and hexagon nuts, to afford maximum support.

• **SIDE MOUNTING BRACKETS:**

These may be used separately or with shelves as shown. Slotted holes on the brackets provide any vertical adjustment required.

DOORS:

For sake of clarity, doors are not shown on the frame drawing. They are stamped from one piece of 1/16" steel, and "dutch-formed" on all sides providing smooth double-thick edges. Adequate ventilation is obtained from full ventilating (venetian-type) louvers. Lock type handles are supplied on racks with both front and rear doors. Non-locking handles are used on racks with rear doors only; locking type handles are optional.

• **OUTLETS:**

"Knockout holes" are available on cabinet side for connecting cables; a duplex outlet, outlet box and plate are mounted on cabinet under rear door.

• **RECESSED SUB-BASES:**

They are available for all modular type racks as an optional accessory.

• **FLOOR LEVELERS:**

Four are supplied with all modular type racks.

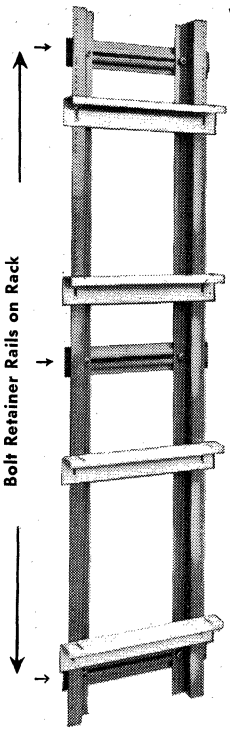
PAR-METAL CABINET RACK ACCESSORIES

VERTICAL SIDE SUPPORTS



These vertical side supports are supplied in sets of four uprights to fit all Modular racks listed on PAR-METAL Pages 4 thru 6. (Cut shows side mounting brackets in place which are sold separately — see listing below).

Supports are fastened to bolt retainer rails which hold panel mounting angles in place, and are adjustably mounted from front to back of rack. Holes are **drilled** and **tapped vertically** to provide adequate vertical adjustment for mounting brackets, shelves, and various sliding devices.

The clearance between supports (from right to left) when installed in racks for **19"** wide panels is **17¾"**; clearance when installed in racks for **24"** wide panels is **22¾"**; clearance when installed in racks for **30"** wide panels is **28¾"**. All supports are 2⅝" wide and 1½" deep.

Supports are made from 7/64" thick steel, finished in aluminum enamel. Each set is supplied with ⅜" dia. bolts, lock washers, and nuts for rack mounting.

RACK TYPE EXTENSION TABLES

These tables are mounted to the front of cabinet racks. They are made from ¾" plywood to which is bonded 1/16" thick formica of a dark grey pattern on both top and apron, which is 2½" high.

The apron is substantially reinforced for fastening to horizontal channel type supports. The channels are made from 7/64" thick steel, and are bolted to vertical side supports which are securely mounted on the inside wall of the rack. The tables may be adjusted at any height from the floor. This assembly provides a very rigid structure, with a smooth writing space across the entire top. There are no metal parts exposed, and no painted metal surfaces to deteriorate with constant usage.

The tables may be installed on any of the modular cabinet racks (without front doors) listed on PAR-METAL Pages 4 thru 6. They are also available for modular rows of four or more racks.

ALL OF THESE TABLE ASSEMBLIES REQUIRE ONLY 3½" OF PANEL SPACE (height).

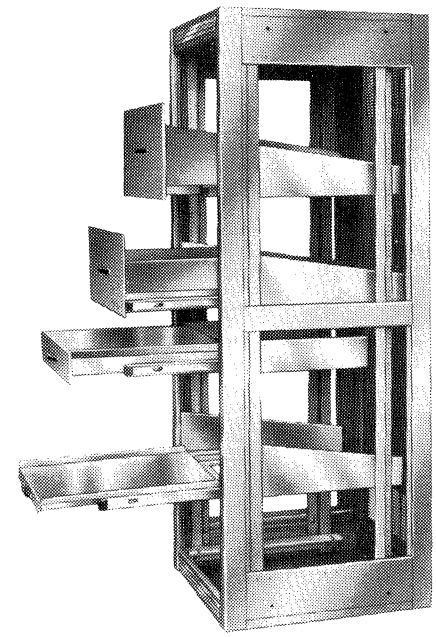
PAR-METAL RACK TYPE SLIDE ASSEMBLIES



GENERAL DESCRIPTION

These slide assemblies will save considerable layout and assembly time as an alternate method of attaching individual slides directly to the interior of a rack. All models are screw mounted to the front panel mounting angles of relay racks, the same as regular panels Additional holes are provided in the side brackets of the shelf assembly for mounting to our standard vertical side supports. Either method will provide a rigid support; both may be used together where desirable.

The basic slide assemblies for use in 19″ wide panel **racks will accommodate chassis up to 17″ wide.** All of the "usable space" noted below may be fully extended from the front of the rack; load capacities are based on the shelf in this position. All units are ruggedly constructed to withstand constant usage. The frames and brackets are made from 7/64″ thick steel. All parts are securely welded or fastened with stainless steel rivets.

BASIC SLIDE ASSEMBLIES

The basic slide assembly illustrated is sold as a complete unit, ready for installation in all 18″ or 24″ deep racks. Panels may be attached to chassis by using standard *brackets or any other convenient method. The panel and chassis assembly is then bolted directly to the slide pan. Formed panels with a minimum height of 7″ are recommended. Four models are listed to fit racks using panels either 19 or 24″ wide. The BS-1940 and BS-2419 are identical in size, but have different load capacities. All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended. All parts are zinc plated.

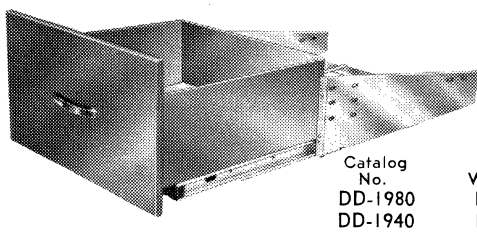
Special brackets are available for mounting rack panels, as listed on Par-Metal page 21.



STORAGE DRAWER ASSEMBLIES

These drawers are suitable for stationery, instruments, parts, etc. The drawers are mounted on the basic slide assemblies described above. They are available either 7″ or 10 1/2″ high to match standard rack panels of the same height. Three models are listed for racks with 19″ wide panels and one for 24″ wide panel racks.

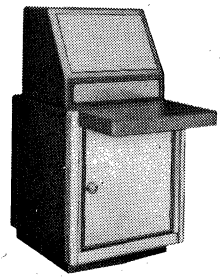
PAR-METAL MODULAR CONSOLE ASSEMBLIES

GENERAL DESCRIPTION

SINGLE UNIT ASSEMBLY

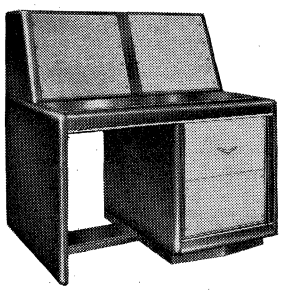


This illustration shows one of our three basic single unit assemblies. Other single unit assembles are shown on the next page.

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been in general use in the electronics industry many years.

While it is obvious that no particular fixed design can serve every requirement, **we have devised a group of standard units,** the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. These models have been functionally designed and smartly styled to keep pace with current trends. New modular units have been added, all of which may be grouped or expanded to meet your specific needs.

DOUBLE UNIT ASSEMBLY



In this double unit assembly, the pedestal rack can also be fitted on the left side.

The **versatile pedestal racks** are the keystone to the entire assembly. They are constructed for heavy duty use, having all the essential features of our type "PL" cabinet racks listed on PAR-METAL Page 5. This would include panel mounting angles which are adjustable from front to back, and provision for installing chassis mounting brackets and shelves where needed. They offer an efficient utilization of space, complete accessibility for servicing, and are **solidly built** to withstand heavy strains **whether in a laboratory or a moving vehicle.**

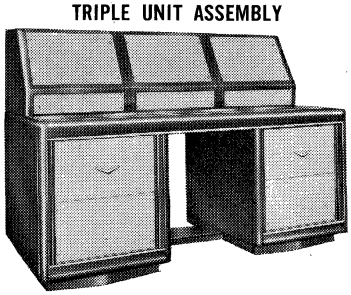
Two models of pedestal frames are available, which are identical except for the depth (front to back). PD-224 frame (24¼" deep) unit may also be used without an extension desk table.

There are four models of desk panel cabinets suitable for mounting on the pedestal frame top to make a complete console. Single or multiple unit consoles may be combined with our Series "PL" racks.

The PD-234 frame (34¼" deep) forms a complete desk structure without the use of extension shelves. When one of our desk panel cabinets is mounted on top, additional space is available in front as a desk writing surface. The 34¼" depth also provides additional interior space.

Unit assemblies are not limited to triple units, and may be extended to modular groups of five or more. If you have a specific problem, do not hesitate to consult us.

TRIPLE UNIT ASSEMBLY



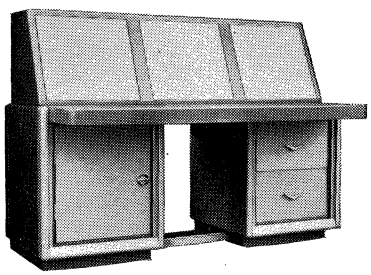
Various triple unit assemblies are available as shown on this and the followng page.

The **side panels** are readily detachable from the outside. No drilling or fitting is necessary for the assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting holes are tapped for screws—no metal screws or clips are used.

STANDARD FINISH — is a combination of light and dark grey hammertone enamel on pedestal frames. All panels are supplied in light grey hammertone enamel.

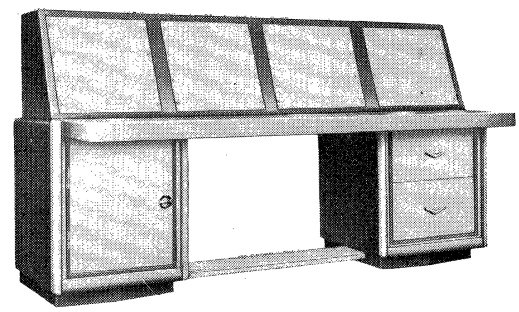
OPTIONAL FINISHES: Specify Finish "**LH**" for all items in light grey hammertone enamel. Specify Finish "**DH**" for all items in dark grey hammertone enamel. Specify Finish "**GM**" for all items in dark grey metallic enamel. Specify Finish "**BG**" for all items in blue grey wrinkle enamel. Specify Finish "**PC**" for all items in primer coat only.

ALTERNATE TRIPLE UNIT ASSEMBLY



The above unit consists of: two No. PD-224 pedestal frames, two No. EP-24 exterior side panels, two No. KP-24 interior side panels, one No. HS-103 high slope cabinet, one No. CD-24 center desk section and one CT-319 extension table, (door drawers, or rack panels for front and back are optional).

TYPICAL QUAD UNIT ASSEMBLY



The above unit consists of: two No. PD-224 pedestal frames, two No. EP-24 exterior side panels, two No. KP-24 interior side panels, one No. HS-104 high slope cabinet, one No. CD-24-2 center desk section and one CT-419 extension table, (door drawers, or rack panels for front and back are optional).

PAR-METAL MODULAR CONSOLE ASSEMBLIES

The group charts below list all necessary and alternate components for single, double, and triple unit assemblies, and also provides a check list to determine your exact requirements. **There are four models of desk panel cabinets specially designed to fit on the top of the assemblies detailed below. For simplicity, they have been omitted; for a complete description see Par-Metal Page 13.** All of the 19" wide panels listed on Par-Metal Pages 18 and 19 may be mounted on these assemblies. Refer to Par-Metal Page 8 for sliding drawers shown in the illustrations on Page 9. **Other component parts suitable for use with these assemblies are shown on Par-Metal Pages 11 and 12.**

RACK PEDESTAL FRAMES

The rack pedestal is the principal component used in all single and multiple unit assemblies. It combines the essential features of our **type "PL" racks** listed on Par-Metal Page 4 and is attractively styled for any environment.

The bottom and step base are formed from 7/64" steel; all other parts are made from 1/16" steel. They are substantially welded together to insure the extra strength and stability needed for heavy duty installation, wherever located. They are capable of carrying heavy transformers, large power supplies, motors, compressors, and similar apparatus.

Panel space at front and back is 21" x 19". Panel mounting angles (or "strips") may be located at any position from front to back, and have tapped holes for mounting standard rack panels, sliding shelves, phono drawers, or storage drawers. Two pairs are supplied — one pair for front mounting and another pair for rear mounting. Additional tapped holes are available at the sides for mounting chassis supports and shelves.

The various units required to make up complete assemblies are listed on **Par-Metal Pages 11, 12,** and **13.** The component check lists on **Par-Metal Page 10** enables you to easily select the parts required. Pedestal frames may be obtained as standard units with heavy duty casters at a nominal additional cost. See listing and description on **Par-Metal Page 12.**

STANDARD FINISH — is a combination of light and dark grey hammertone enamel on pedestal frames.

OPTIONAL FINISHES: Specify Finish **"LH"** for light grey hammertone enamel. Specify Finish **"DH"** for dark grey hammertone enamel. Specify Finish **"GM"** for dark grey metallic enamel. Specify Finish **"BG"** for blue grey wrinkle enamel. Specify Finish **"PC"** for primer coat only.

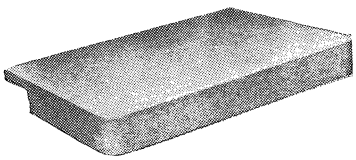
EXTENSION DESK TABLES



These extension tables are used in console assemblies illustrated on Par-Metal Pages 9 and 10. They are made from 3/4" thick plywood, to which is bonded 1/16" thick grey formica.

The formica covers both the top and apron of the table which is 2-1/2" deep. The apron is substantially reinforced for fastening to horizontal channel supports. The assembly provides a rugged structure with a smooth writing space across the entire top.

There are no metal parts exposed, and no metal surfaces to deteriorate with constant usage. As these tables are mounted above the front panels on the pedestal frame, the full front panel space of 21" may be used.

Casters are equipped with 3" diameter composition wheels, capable of supporting loads of 225 lbs. per wheel.

Where pedestal frames with caster assemblies are required, they will be supplied at an additional cost of $4.00 per frame. PAR-METAL CHANNEL RELAY RACKS

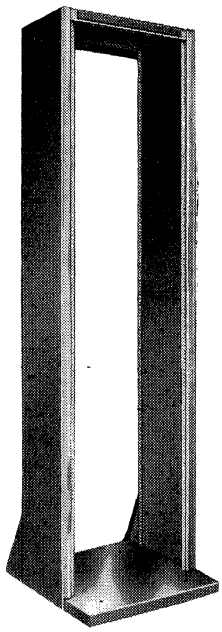
DELUXE TYPE RACKS for 19" and 24" wide panels



No. RR-197

These DeLuxe Channel Type Relay Racks **are made from 7/64" thick steel,** and extend the utility and applicability of the standard channel relay rack.

The panel space is 77" x 19", to match a standard height used on enclosed cabinet racks. The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

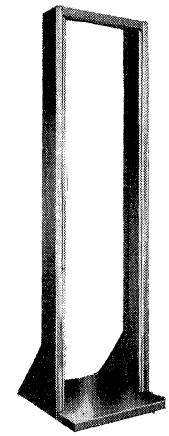
The rack is drilled and tapped for 10/32 screws at **both front and back,** permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The **full** panel space of 77" x 19" is available on the back, the same as the front.

Clear distance between panel mounting flanges (from front to back) is 6-3/4". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on **Par-Metal Page 21.**

When such chassis are mounted at the back, the addition of standard or hinged type panels (see **Par-Metal 19**) will make a rack enclosure with a clear depth of 6-3/4".

The top cross-brace is provided with a grille for ventilation where needed. Two holes are located on each side for bolting racks together in rows; there are no projecting screw heads on the sides. Top brace and vertical channel members are securely welded together. Base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

FINISH: Standard finish is black ripple enamel. Blue grey wrinkle or grey hammertone is also available without extra charge if so specified on your order.



No. RX-195

STANDARD TYPE RACKS for 19" wide panels

Racks are sturdily constructed from 7/64" pressed steel, and are braced at the back as illustrated. They have been improved by a formed recess for the panels; edges of panels are no longer exposed, and rigidity of the rack has been greatly increased. Two vertical members and top crossbrace are securely WELDED TOGETHER.

Panel mounting holes are accurately drilled for standard rack panels, tapped for 10-32 machine screws at the front only. An ample supply of panel mounting screws are supplied.

Upright channels are 3" deep with flanges 1⅛" wide. Clearance between uprights is 17¾". Base is 20⅞" deep and extends both front and rear, and is 21" wide for either unit.

FINISH: Standard finish is black wrinkle. For blue grey wrinkle or grey hammertone enamel add 10%.

They may be used with any chassis up to 13" x 17" in size. All cabinets are rigidly constructed of 1/16" thick cold rolled sheet steel, with all joints electrically welded. Louvres provide ample ventilation through sides and back. Piano type hinges are used on the top doors, which are provided with chrome plated handles. Panel mounting screws and washers are furnished.

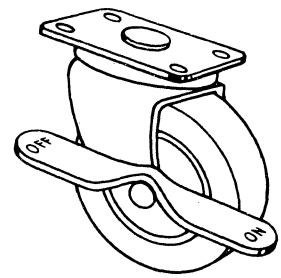
BRAKE TYPE CASTERS



During the past few years, the use of brakes on roller trucks has become desirable both as a utility and safety measure. This is particularly true where racks have been loaded to capacity with heavy equipment.

We now have available foot brake type casters as illustrated for use on all heavy duty roller trucks. Brake type casters are supplied to replace the **two front casters** of single roller trucks and to replace the **three front casters** of double roller trucks. Additional cost **per roller truck** is as follows:

For single units (HD-412, etc.).....$ 8.50
For double units (HD-412-2, etc.)..... 12.75

WE CAN SUPPLY ON A "SEMI-CUSTOM" BASIS pressed steel roller trucks for our cabinet racks up to 36" wide and 88" long. They can be equipped with 4" dia. wheel casters and necessary foot brakes. The extra width is used in front of the rack assembly to provide stability where extension shelves and other accessories are mounted on the front of the racks. Drawings and prices available upon request.

EXPAND-A-RACK SERIES

DESCRIPTION:

A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
B. Figure "A" shows two Expand-A-Racks joined together.
C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.
D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

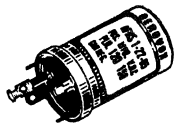
CAPACITORS

ELECTROLYTICS



TYPE AFH (85°C) TWIST PRONG ELECTROLYTIC CAPACITOR

SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong mounting electrolytic capacitors with all the latest refinements — 85°C operation — high purity aluminum foil construction through out — improved moisture resistant seal. Types AFHS-PWHS are specially constructed for high ripple current circuits. PWH and PWHS are constructed for printed wiring board applications.

These units operate over a wide temperature range with a minimum change in capacitance.

While designed for filter audio bypass applications in Radio-TV and Amplifier equipment as exact replacements, many values are rapidly gaining acceptance in industrial applications.

They are manufactured to meet all requirements of EIA specification number RS-154. Capacity tolerances of this specification are listed below.

ELECTROLYTIC CAPACITY TOLERANCES

0-50 Volts	—	—10 +250%
51-350 Volts	—	—10 +100%
351 Volts & Up	—	—10 +50%

Aerovox Corporation is currently working on a size reduction program. Many sizes shown in the following listing reflect latest design figures. However Aerovox reserves the right to furnish previous catalog sizes until present stocks are depleted.

The AFH capacitors listed here include only those ratings which might find usage in industrial applications. A complete line of 1152 ratings may be found in the latest Aerovox Catalog, IDC 563, and may be requested from Aerovox Corporation, Distributor Division, or through your nearest authorized Aerovox Industrial Distributor.

Metal Can Tubular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.
Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers.
Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.
Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 1/4" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.
Tolerance and surge voltage are in accordance with EIA Specification RS-154.
The factory is currently in the process of reducing sizes of this type. Aerovox reserves the right to ship sizes listed below until present stock is depleted and smaller sizes as they become available.

AEROVOX CAPACITORS

ELECTROLYTICS–(Continued)
TYPE CRE ULTRA-MINIATURE 85°C ALUMINUM CASED ELECTROLYTICS

Temperature Range: —30°C to +85°C
Capacitance Tolerance: —10%, +100%
Nominal lead length: 1½"

Ultra-miniature, tubular, aluminum cased electrolytics with tinned copper leads. Furnished with insulating sleeves of heat shrinkable mylar tubing which adds only 1/32" to can diameter and 1/16" to length.

Ideal for use in bypass, filter, and coupling applications in low-voltage, compact, miniaturized equipments such as personal radios, hearing aids, microphones, wire receivers, etc.

Elimination of variable or high resistance connections, freedom from corrosion and extremely low leakage characteristics have been attained through the use of a combination of all-welded construction, high purity ingredients and extreme care in manufacture and test procedures.

Packaging: Packaged in new, patented, straight-lead, 5-pack container. Keeps leads straight. Holds five units. The 5-pack is adaptable to packaging in bulk or in single inside cartons. For full technical information request Bulletin NPJ-124

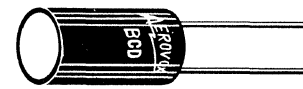
TYPE B C D UPRIGHT MOUNTING PLASTIC CASED ELECTROLYTICS



"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.

High purity foil insures long life and low leakage.

Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a + (plus) mark on case.

ADDITIONAL STYLES

For complete information on any Types shown on this page request Catalog or Brochure from Aerovox Corporation, Distributor Division, or your nearest authorized Aerovox Industrial Distributor.

Type SRE "Bantam" Metal Tubular Electrolytics

Although smaller than the PRS the SRE handles full size loads at operating temperature range of 0°C to 85°C at rated voltage. Sealed in aluminum cans and furnished with a cardboard insulating sleeve. Negative grounded to can. If required without tube specify type SREN.

33 Stock Values – 8 Voltages

TYPE G
Insulated Screw-Mounting Capacitors

Hermetically-sealed aluminum can unit, threaded cover size ⅞—16 with hex nut and washer for convenient mounting on chassis. Washer can be used to insulate can from chassis. Terminals molded in cover. Cathode connection thru terminal in cover. These units are the commercial equivalent of case style CE41 and 42 of specification MIL C62A.

7 Stock Values – 3 Voltages

TYPE FF
Photo-Flash Capacitors

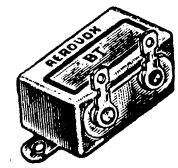
Selective choice of highest purity materials makes these units ideal for rugged photoflash application calling for lowest leakage requirements. Type FF-1 furnished in molded black plastic container, type FF-2 in aluminum can with black glazed tubing; both units furnished with screw lug terminals. Highly resistant to moisture and oil. Surge voltages and time duty cycles as listed in EIA specification No. RS-154.

2 Stock Values

TYPE E
Hermetically-Sealed, Aluminum, Round Metal-Cased Capacitors

Can be mounted with terminals upright or inverted by use of a ring-type clamp provided with unit. Can is floating, thus having two terminals on single-section capacitors, three on duals, and four on triples.
These units are the commercial equivalent of case style CE31, 2 and 3 of MIL Specification C62A.

16 Stock Values – 10 Voltages



TYPE BT
Drawn-Case "Bathtub" Electrolytic Capacitors

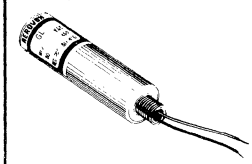
21 Stock Values – 6 Voltages



TYPE GL

These ever-popular inverted-mounting, aluminum can units, are furnished with the same high purity materials as the more expensive type E and G. Two separate color-coded leads 4" long for each section. Inverted chassis mounting can be made, using palnut and threaded neck. Threaded neck size ⅝—18.

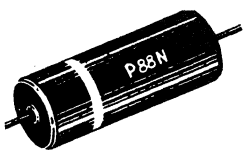
24 Stock Values – 6 Voltages

PAPER CAPACITORS

TYPE P84CM DURAMIC® Ceramic-Cased Tubular Capacitors

New ceramic (dense steatite) encased paper tubular for performance above that of conventional paper tubulars. New thermosetting end-seals for exceptional humidity protection—250 hour humidity test as per REC-118. Firmly imbedded terminals will not work loose or pull out. Operating temps are —55°C to +85°C. Meets all requirements of EIA Spec. REC-118, hi-temp range, class M.

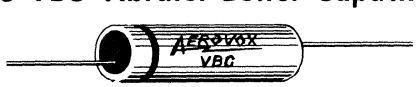
34 Stock Values – 5 Voltages



TYPE P88N
†DURANITE
Duranite Blue Molded Tubular Capacitors

Toughest capacitors ever offered for radio-electronic equipment, DURANITE capacitors. Design, impregnant, processing, and casing insure glove-fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard casing, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pull out, won't work loose. Moisture-proof; operate from sub-zero to over 212°F. Exposure to temperatures of 250°F. will not impair life or performance, no deterioration on the shelf. A white band around one end of the capacitor identifies the outside foil.

Type VBC Vibrator Buffer Capacitors



These units are heavy-duty, Hyvol M impregnated, vibrator buffer capacitors in ceramic tubes, specifically designed for severe-service auto-radio applications.

AUTOPASS® Vertical Mounting Plastic-Cased Paper Capacitors

Aerovox Autopass capacitors were specifically designed and developed for use in conjunction with printed-wiring assemblies where it is highly desirable to mount capacitors at right angles to the mounting surface thereby conserving valuable space

TYPE V161

AEROFILM® (MYLAR*) CAPACITORS

V161 Aerofilm Tubular Capacitors are high quality units in Polycap® cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C.
Their excellent resistance to humidity and moisture are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%.

This type was formerly designated as V84C-V161.

PAPER SUB-MINIATURES

Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction. Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hyvol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case, for a one-minute period. Ambient temperature shall be plus 25°C. plus or minus 10° C. during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Type P323S and P323SX are rigidly processed to assure operation over the temperature range of —65°C. to +125°C. The capacitor sections on types P323S utilize an inserted tab construction to obtain minimum size. Type P323SX utilizes extended foil construction for those applications where operation is required at very low AC voltages.

For equivalent types rated —65°C. to +100°C. in the same case size as shown order as P123S, SX, etc. and request prices.
These subminiature units are widely used in many applications because of their high reliability and varied case styles. To order any of these style variations add the suffix letter shown to the basic designation listed.

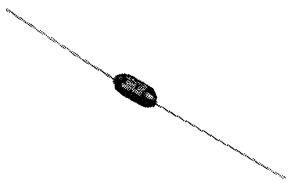
TYPE P95ZN

Micro-Miniature Dipped Metallized Paper Capacitors



Aerovox Type P95ZN capacitors employ an entirely new internal construction concept and utilize a dipped resinous housing to produce remarkably small sizes. The dielectric is a distinct departure from conventional foil paper and previous metallized paper construction. This new and improved metallized dielectric provides both the dielectric and the electrodes. Since capacitance is predetermined mechanically in the initial processing, the human element is eliminated for capacitance control. In addition, the P95ZN offers unusually strong lead connections as the result of an exclusive Aerovox manufacturing process. Leads are hot tin-coated phosphor bronze.

These Aerovox micro-miniature capacitors are especially suited for applications where low capacity units are now being used.

CAPACITORS

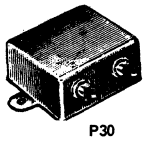
INDUSTRIAL SECTION — MIL TYPES MIL-C-25C



TYPES CP53, CP54, CP55

Hyvol J or H oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is ±10% (K), on multiple section units +20 —10% (V).
